ELECTRONICS LAB MANUAL (VOLUME 2) 2018-10-01

this book is evolved from the experience of the author who taught all lab courses in his three decades of teaching in various universities in india the objective of this lab manual is to provide information to undergraduate students to practice experiments in electronics laboratories this book covers 118 experiments for linear analog integrated circuits lab communication engineering lab power electronics lab microwave lab and optical communication lab the experiments described in this book enable the students to learn various analog integrated circuits and their functions analog and digital communication techniques power electronics circuits and their functions microwave equipment and components optical communication devices this book is intended for the b tech students of electronics and communication engineering electrical and electronics engineering biomedical electronics instrumentation and control computer science and applied electronics it is designed not only for engineering students but can also be used by bsc msc physics and diploma students key features contains aim components and equipment required theory circuit diagram pin outs of active devices design tables graphs alternate circuits and troubleshooting techniques for each experiment includes viva voce and examination questions with their answers provides exposure on various devices target audience b tech electronics and communication engineering electrical and electronics engineering biomedical electronics instrumentation and control computer science and applied electronics bsc msc physics diploma engineering

Electronics Lab Manual 2019-11-30

this systematically designed laboratory manual elucidates a number of techniques which help the students carry out various experiments in the field of digital signal processing digital image processing digital signal processor and digital communication through matlab in a single volume a step wise discussion of the programming procedure using matlab has been carried out in this book the numerous programming examples

for each digital signal processing lab image processing lab signal processor lab and digital communication lab have also been included the book begins with an introductory chapter on matlab which will be very useful for a beginner the concepts are explained with the aid of screenshots then it moves on to discuss the fundamental aspects in digital signal processing through matlab with a special emphasis given to the design of digital filters fir and iir finally digital communication and image processing sections in the book help readers to understand the commonly used matlab functions at the end of this book some basic experiments using dsp trainer kit have also been included audience this book is intended for the undergraduate students of electronics and communication engineering electronics and instrumentation engineering and instrumentation and control engineering for their laboratory courses in digital signal processing image processing and digital communication key features includes about 115 different experiments contains several figures to reinforce the understanding of the techniques discussed gives systematic way of doing experiments such as aim theory programs sample inputs and outputs viva voce questions and examination questions
