Current Concepts in Dental Implantology

2015-02-25

implant dentistry has changed and enhanced significantly since the introduction of osseointegration concept with dental implants because the benefits of therapy became apparent implant treatment earned a widespread acceptance therefore the need for dental implants has caused a rapid expansion of the market worldwide dental implantology continues to excel with the developments of new surgical and prosthodontic techniques and armamentarium the purpose of this book named current concepts in dental implantology is to present a novel resource for dentists who want to replace missing teeth with dental implants it is a carefully organized book which blends basic science clinical experience and current and future concepts this book includes ten chapters and our aim is to provide a valuable source for dental students post graduate residents and clinicians who want to know more about dental implants

this comprehensive book discusses cartilage repair and all its aspects these aspects vary from basic

~~insights in cartilage biology and regeneration via~~
mri to results of existing cartilage repair techniques and upcoming novel approaches
fundamental cartilage biology is the topic covered within the first chapters of the book these chapters not only provide an insight in healthy damaged and regenerative cartilage but also describe developments in gene therapy and methods to enhance chondrogenesis of stemcells and prevent hypertrophic differentiation there is a huge progress in the possibilities of mr imaging of both healthy damaged and regenerative cartilage these developments not only enable better monitoring of cartilage repair but may also unravel the pathophysiology of the development of cartilage defects different cartilage repair techniques e g allografts autologous chondrocytes transplantation act microfracture there technical aspects e g developments towards an total arthroscopic approach pitfalls and outcomes are reported in the following chapters in these chapters factors important for the results of cartilage repair such as meniscal repair patient factors are described finally an overview of novel cartilage repair techniques such as minced cartilage denovo cartilage and more areas are discussed in this comprehensive addition to the literature

~~latest advances in biomaterials and their~~
applications advanced biomaterials fundamentals
processing and applications reviews the latest
biomaterials discoveries enabling readers to take
full advantage of the most recent findings in
order to advance the biomaterials research and
development reflecting the nature of biomaterials
research the book covers a broad range of
disciplines including such emerging topics as
nanobiomaterials interface tissue engineering the
latest manufacturing techniques and new polymeric
materials the book a contributed work features a
team of renowned scientists engineers and
clinicians from around the world whose expertise
spans the many disciplines needed for successful
biomaterials development all readers will gain an
improved understanding of the full range of
disciplines and design methodologies that are used
to develop biomaterials with the physical and
biological properties needed for specific clinical
applications

Intracellular Delivery III

a critical review is attempted to assess the
status of nanomedicine entry onto the market the
emergence of new potential therapeutic entities
such as dna and rna fragments requires that these
new drugs will need to be delivered in a cell and
organelle specific manner although efforts have
been made over the last 50 years and some develop
such delivery technology no effective and safe

~~all clinically approved protocol for cell specific~~
drug delivery in humans exists as yet various particles macromolecules liposomes and most recently nanomaterials have been said to show promise but none of these promises have so far been reduced to human clinical practice the focus of this volume is on cancer indication since the majority of published research relates to this application within that we focus on solid tumors solid malignancies our aim is critically to evaluate whether nanomaterials both non targeted and targeted to specific cells could be of therapeutic benefit in clinical practice the emphasis of this volume will be on pharmacokinetics pk and pharmacodynamics pd in animal and human studies apart from the case of exquisitely specific antibody based drugs the development of target specific drug carrier delivery systems has not yet been broadly successful at the clinical level it can be argued that drugs generated using the conventional means of drug development i e relying on facile biodistribution and activity after preferably oral administration are not suitable for a target specific delivery and would not benefit from such delivery even when a seemingly perfect delivery system is available therefore successful development of site selective drug delivery systems will need to include not only the development of suitable carriers but also the development of drug entities that meet the required pk pd profile
