

the heart wikipedia

May 12 2024

the heart is a muscular organ that pumps blood throughout the body. It is located in the chest cavity, between the lungs. The heart is composed of four chambers: the right atrium, right ventricle, left atrium, and left ventricle. Blood enters the right atrium from the body and is pumped into the right ventricle, which then pumps it to the lungs. From the lungs, blood enters the left atrium and is pumped into the left ventricle, which pumps it to the rest of the body. The heart is a vital organ and its failure can lead to death.

heart structure function diagram anatomy facts

Jan 08 2024

the heart is a muscular organ that serves as a pump to circulate the blood. It may be as simple as a straight tube as in spiders and annelid worms or as complex as the four-chambered double pump that is the center of the circulatory system in humans, other mammals, and birds. Learn more about the heart in this article.
