impressive a gifted theologian manages to place cavell in conversation with continental thought as productively as anyone before him notre dame philosophical reviews the american philosopher stanley cavell b 1926 is a secular jew who by his own admission is obsessed with christ yet his outlook on religion in general is ambiguous probing the secular and the sacred in cavell s thought espen dahl explains that cavell while often parting ways with christianity cannot dismiss it either focusing on cavell s work as a whole but especially on his recent engagement with continental philosophy dahl brings out important themes in cavell s philosophy and his conversation with theology it is undoubtedly tricky business writing a book about stanley cavell and any book enterprising enough to bring him into conversation with christian theology should be additionally commended especially one as likable as espen dahl s modern theology clearly concisely and powerfully shows cavell s frequent and deep links to and engagements with religion and religious themes and with so called continental philosophy dahl has also written a highly accessible book on cavell and yet one which in no way waters down or dilutes cavell s thinking there ought to be more books of this kind on cavell international journal for the philosophy of religion in making such a convincing case for claiming that religion is stanley cavell s pervasive hence invisible business espen dahl also puts cavell s writings into sustained and productive dialogue with the work of levinas and girard in ways other commentators have not previously managed stephen mulhall oxford university

two general questions stood at the beginning of this phd thesis namely what are the mechanisms which lead to the emergence and establishment of new technologies how can this process of technological change be influenced politically in this sense conceptual and theoretical interests were the early driving forces of the research work this is also reflected in the considerable attention paid to the nature of technological change and political control the result is an holistic per spective which builds on inputs from different disciplines and aims at dynamic interpretation this however created a severe methodological problem how could such a comprehensive perspective be used constructively to develop this link between theory and forward looking policy oriented analysis and to devise a methodology which showed explicitly how this approach could be used in a con structive way were in fact the major challenges of this research project the appli cation to the example of combined heat and power generation and the comparison of the developments in the uk and in germany serve the purpose to demonstrate how this approach and methodology can be implemented in practice these as pects were also of particular interest to the institute for prospective technological studies ipts one ofthe institutes of the european commission s joint research centre where most of the research work reported in this phd thesis was carried out
