2012 2 24 a control system is defined as a system of devices that manages commands directs or regulates the behavior of other devices or systems to achieve a desired result a control system achieves this through control loops which are a process designed to maintain a process variable at a desired set point a control system manages commands directs or regulates the behavior of other devices or systems using control loops it can range from a single home heating controller using a thermostat controlling a domestic boiler to large industrial control systems which are used for controlling processes or machines 2024 4 17 a control system is a system or a set of devices that manages command and directs the behavior of other devices or systems it works on the principle of the input process output cycle since the output is controlled by varying input they are widely used in electronics automation and engineering 2023 3 31 a control system is a set of mechanical or electronic devices that regulates other devices or systems by way of control loops typically control systems are computerized control systems are a central part of production and distribution in many industries automation technology plays a big role in these systems 2018 12 30 control systems are integral to modern engineering responsible for managing and regulating the behavior of other systems on this page we explore the fascinating world of control systems including their design stability and various types 1998 7 20 control system means by which a variable quantity or set of variable quantities is made to conform to a prescribed norm it either holds the values of the controlled quantities constant or causes them to vary in a prescribed way control engineering or control systems engineering is an engineering discipline that deals with control systems applying control theory to design equipment and systems with desired behaviors in control environments 1 2020 8 19

a control system is a mechanism that directs the input it receives through the systems and regulates their output the above figure shows the block diagram of a control system a control system alters the    2023  6  19  a control system manages commands directs or regulates the behavior of other devices or systems using control loops it can range from a single home heating controller using a thermostat controlling a domestic boiler to large industrial control systems which are used for controlling processes or machines    2022  6  3  this textbook is designed for an introductory one semester course in control systems for undergraduates and graduates in various engineering departments such as electrical mechanical aerospace and civil it is written to be
