this book explores the many provocative questions concerning the fundamentals of data analysis it is based on the time tested experience of one of the gurus of the subject matter why should one study data analysis how should it be taught what techniques work best and for whom how valid are the results how much data should be tested which machine languages should be used if used at all emphasis on apprenticeship through hands on case studies and anecdotes through real life applications are the tools that peter j huber uses in this volume concern with specific statistical techniques is not of immediate value rather questions of strategy when to use which technique are employed central to the discussion is an understanding of the significance of massive or robust data sets the implementation of languages and the use of models each is sprinkled with an ample number of examples and case studies personal practices various pitfalls and existing controversies are presented when applicable the book serves as an excellent philosophical and historical companion to any present day text in data analysis robust statistics data mining statistical learning or computational statistics

this book is simultaneously a biography of admiral herbert victor wiley and a history of the u s navy s lighter than air program as tensions rose between japan and the u s over control of east asia and the pacific ocean the prospects of war between the two nations increased the navy tracked the germans use of zeppelins during the first world war and saw in them an aircraft with the potential to conduct long range reconnaissance over the oceans something that could not be achieved by airplanes or surface ships while rapid progress was being made in manned flight it was still young enough that the future of lta vs hta flight was unknown at the time however airships had a much greater range than airplanes making them suitable for reconnaissance in its history the navy had four great airships the u s s shenandoah the u s s los angeles the u s s akron and the u s s macon wiley served on all four of these airships and the history of these vessels is covered through the career of wiley three of the airships ended in disaster and wiley survived the crash of two of them the book explores in detail the events leading to the crash of each airship through examination of the records of the navy s courts of inquiry that investigated the cause of each crash the book also tracks issues surrounding the use of non flammable helium as a lifting gas instead of highly explosive hydrogen used by the germans the u s had a monopoly on the supply of helium while germany sought to purchase helium from the u s the government board governing the sale of helium blocked its availability to germany on the basis it might be used for wartime purposes dr hugo eckener had run the zeppelin works in friedrichshaven since the end of ww i and he had a vision for lta flight that was peaceful including international transoceanic passenger and freight services the outbreak of ww ii ended the zeppeling industry and dashed all of eckener s dreams following the crash of

the macon wiley returned to the surface fleet eventually becoming commander of destroyer squadron 29 in the asiatic fleet shortly before the bombing of pearl harbor

we live in a world according to n katherine hayles where new languages are constantly emerging proliferating and fading into obsolescence these are languages of our own making the programming languages written in code for the intelligent machines we call computers hayles s latest exploration provides an exciting new way of understanding the relations between code and language and considers how their interactions have affected creative technological and artistic practices my mother was a computer explores how the impact of code on everyday life has become comparable to that of speech and writing language and code have grown more entangled the lines that once separated humans from machines analog from digital and old technologies from new ones have become blurred my mother was a computer gives us the tools necessary to make sense of these complex relationships hayles argues that we live in an age of intermediation that challenges our ideas about language subjectivity literary objects and textuality this process of intermediation takes place where digital media interact with cultural practices associated with older media and here hayles sharply portrays such interactions how code differs from speech how electronic text differs from print the effects of digital media on the idea of the self the effects of digitality on printed books our conceptions of computers as living beings the possibility that human consciousness itself might be computational and the subjective cosmology wherein humans see the universe through the lens of their own digital age we are the children of computers in more than one sense and no critic has done more than n katherine hayles to explain how these technologies define us and our culture heady and provocative my mother was a computer will be judged as her best work yet
