to achieve a more responsive and more readily deployable fleet of surface combatants the navy adopted the fleet response plan frp in 2003 to replace its traditional ship maintenance and readiness cycle the goal of the frp is to have non deployed ships achieve a high level of readiness earlier and to maintain high readiness longer so that they can deploy on short notice however a challenge of implementing the frp is establishing the processes and procedures as well as a ready industrial base to facilitate maintenance planning and execution to meet the now unpredictable frp surge requirements and maintenance demands by concentrating specifically on the ddg 51 class of destroyers the authors of this report look at the effects the frp has had thus far and determine whether maintenance resources are meeting maintenance demands and whether related industry resources have been coordinated effectively overall the authors determine that the initiative appears to have promising effects but that more time will be needed to assess maintenance supply and demand apart from the increase of funding tied to military operations post september 11 2001
