maps and atlases pieter coecke van aelst 1502 1550 was renowned throughout renaissance europe as a draftsman painter and publisher of architectural treatises the magnificent tapestries he designed were acquired by the wealthiest clients of the day up to and including rulers such as emperor charles v king francis i of france king henry viii of england and grand duke cosimo i de medici of tuscany at the same time coecke was remarkable not only for the complexity and unparalleled quality of his tapestries but also for his fluency in various media this lavishly illustrated volume examines the full range of his work from tapestry and stained glass window designs to panel paintings prints drawings and architectural treatises though only forty eight when he died coecke was one of the greatest netherlandish artists of the sixteenth century his paintings and drawings initially wrought in the style of the antwerp mannerists evolved through his enthusiastic response to italian renaissance design and influenced generations of artists in his wake this comprehensive study explores coecke s stylistic development as well as his substantial contribution to the body of great renaissance art in flanders featuring twenty monumental tapestries along with many of their cartoons and preparatory sketches plus seven paintings additional drawings and printed matter many of them newly photographed for this volume grand design provides a thorough reappraisal of coecke s work amply justifying the high regard in which coecke s work was held and its wide dissemination long after his death literature cited in agricola dissertations abstracts international eric abi inform medlars ntis psychological abstracts and sociological abstracts selection focuses on education legal aspects indexes contemporary digital forensic investigations of cloud and mobile applications comprehensively discusses the implications of cloud storage services and mobile applications on digital forensic investigations the book provides both digital forensic practitioners and researchers with an up to date and advanced knowledge of collecting and preserving electronic evidence from different types of cloud services such as digital remnants of cloud applications accessed through mobile devices this is the first book that covers the investigation of a wide range of cloud services dr kim kwang raymond choo and dr ali dehghantanha are leading researchers in cloud and mobile security and forensics having organized research led research and been published widely in the field users will gain a deep overview of seminal research in the field while also identifying prospective future research topics and open challenges presents the most current leading edge research on cloud and mobile application forensics featuring a panel of top experts in the field introduces the first book to provide an in depth overview of the issues surrounding digital forensic investigations in cloud and associated mobile apps covers key technical topics and provides readers with a complete understanding of the most current research findings includes discussions on future research directions and challenges this book celebrates the 10 year anniversary of software center a collaboration between 18 european companies and five swedish universities by presenting some of the most impactful and relevant journal or conference papers that researchers in the center have published over the last decade the book is organized around the five themes around which research in software center is organized i e continuous delivery continuous architecture metrics customer data and ecosystems driven development and ai engineering the focus of the continuous delivery theme is to help companies to continuously build high quality products with the right degree of automation the continuous architecture theme addresses challenges that arise when balancing the need for architectural quality and more agile ways of working with shorter development cycles the metrics theme studies and provides insight to understand monitor and improve software processes products and organizations the fourth theme customer data and ecosystem driven development helps companies make sense of the vast amounts of data that are continuously collected from products in the field eventually the theme of ai engineering addresses the challenge that many companies struggle with in terms of deploying machine and deep learning models in industrial contexts with production quality each theme has its own part in the book and each part has an introduction chapter and then a carefully selected reprint of the most important papers from that theme this book mainly aims at researchers and advanced professionals in the areas of software engineering who would like to get an overview about the achievement made in various topics relevant for industrial large scale software development and management and to see how research benefits from a close cooperation between industry and academia
