Global Warming and Energy Demand 1995 this book provides the results of an interdisciplinary seminar from 1967 in which researchers identify and define problems within the environment and present different avenues to correct them featuring the research and analysis of professionals in a variety of fields from physics and engineering to

landscape architecture and theater the quality of the environment is a rewriting of a seminar held at the university of wisconsin in 1967 through investigation of the major aspects of the environment including land air and water as well as aesthetic and psychosocial aspects information is presented on the identification and definition of problems within the environment in the 1960s and some of the first avenues proposed to bring about possible change

Women and the Environment 1991 a renowned writer on the environment shows how population growth rising consumption and damaging technologies have combined to create the biggest environmental crisis in human history spurring agricultural and industrial revolutions and perhaps speeding up the third revolution the transition to sustainable development

Living in the Environment 1974 the purpose of this collection of essays is to shed some light on the complex relationship between environmental quality and the distribution of income are the preferences of the poor towards a cleaner environment really different from those of the rich environmental economists have traditionally focused on efficiency issues in their analyses the quality of the environment is usually related to aggregate or average variables like per capita income policy recommendations are usually formulated considering efficiency with no regard for equity and also the predicted effects of policies are evaluated in aggregate terms the essays collected in this volume go into the problem of the relationship between environmental quality and income distribution the book s opening essay shows how different theories of economic growth and environmental quality seem to suggest that the higher the level of income the higher is the value of environmental protection the essays that follow a mix of already published papers and of papers solicited for this book analyse the relationship between environmental quality and income distribution from different perspectives both micro and macro and on the basis of more than one methodology this book highlights that the preferences of the poor towards a cleaner environment may differ from those of the rich but income is also very likely to represent only one factor affecting them the essays consider other relevant factors affecting preferences for environmental quality what clearly emerges is that the distribution of costs and benefits of environmental policies is the key for their successful implementation and that further research is needed to both address the distributional effects themselves and the strategies to mitigate them

The Quality of the Environment 2002-01-15 given the ubiquity of environmental rhetoric in the modern world it s easy to think that the meaning of the terms environment and environmentalism are and always have been self evident but in surroundings we learn that the environmental past is much more complex than it seems at first glance in this wide ranging history of the concept etienne s benson uncovers the diversity of forms that environmentalism has taken over the last two centuries and opens our eyes to the promising new varieties of environmentalism that are emerging today through a series of richly contextualized case studies benson shows us how and why particular groups of people from naturalists in napoleonic france in the 1790s to global climate change activists today adopted the concept of environment and adapted it to their specific needs and challenges bold and deeply researched surroundings challenges much of what we think we know about what an environment is why we should care about it and how we can protect it

The Third Revolution 1993 in the book environment and self endangered man the author has conveyed a message that todays problems of environment have been created by people and can only be solved by willing and cooperative efforts by people at all levels of society according to him this can only be achieved if people of opposing view points and interests listen to each others point of view and develop cooperation instead of competition if they

fail in their efforts they will endanger the existence of man kind because dwindling resources combined with endemic tendency of violence in human nature and availability of weapons of mass destruction would generate genocidal wars that would extinguish much of the life on earth the resources section of the book traces the history of the environment movement and defines environment as a resource platform shared by all life forms resources of land water and air and controversies of ozone hole and global warming are discussed from the view points of environmentalists conservationists developers administrators scientists and general public there is also a wealth of information on subjects ranging from destruction of rain forests to coral reefs from water sheds to wetlands and dam and river management additionally its chapter on pollutants holds important information of interests to consumer advocates the book differs from other books on environment in many ways in its section on people it looks at the environment problems on the basis of humanity and not of one or two nations it considers the problems of developing nations as well as those of developed industrial economies and recognizes that we need both economic development and environment preservation it is sympathetic to the plight of poor urban slum dwellers as well of those who suffer in rural areas it advocates building up of environments capacity to sustain life and not rely solely on conservation efforts it pays attention to social as well as ecological problems and considers the impact of international politics of the realist theory non proliferation treaty wto and gatt on sustainable development policies and environmental problems it identifies wars as one of the major causes of environmental degradation and last but not the least it emphasizes need for careful scientific evaluation of problems and necessity of avoiding misleading public relations propaganda a number of colored photographs lend emphasis to the narrative of the text and all chapters of the book carry a large number of references that can be used for further reading a partial list of threatened and endangered species from the iucs red book is given in appendix it brings home the extent of the environmental degradation that has occurred the book can be used as a text for environmental studies as a required reading in advance courses in social studies environmental planning rural studies and a host of allied subjects and ngos social activists and consumer advocates will be able to use the book as reference source in their libraries and discussions contents1 environment as a resources platform2 land and water resources3 biodiversity and endangered species4 atmosphere and its controversies5 pollutants6 population problem7 people8 endangered humansappendix aappendix bappendix cauthor indexsubject index

Is the Environment a Luxury? 2014-07-11 why is the environment deteriorating in so many worrisome ways what can be done about it the author a teacher of international environmental law presents a clear and balanced overview of the perils facing the global environment including climate change deforestation disappearance of wetlands threats to biodiversity toxic waste and stresses on marine resources meeting these challenges would be hard enough in the best of circumstances but christopher stone shows how the difficulties are compounded by the demands of the poor nations not to be denied the benefits of development even if that means as it often will extra expense if the environment is not to suffer this is not yet another doomsday book readers have been bombarded with too many dire conjectures unrelieved by any glimpse of solution the author complains with the result that the public has been overwhelmed by a sense of confusion and fatalism the ordinary reader will find stone s own response both clarifying and uniquely positive he argues that some undoubtedly serious perils such as global warming have probably drawn disproportionate attention while far more immediate and lethal but also more practically correctable hazards such as the looming worldwide shortage of clean water and the lingering threat of shoddy eastern european nuclear reactors have too often gone ignored stone proceeds to show that there is no one silver bullet for all these ills not even although he supports it population control he reviews a panoply of devices that

should be considered among them special pollution taxes loans to poor countries conditioned on preservation of threatened ecosystems and tradable fisheries quotas strategic options are not lacking the problem stone tackles is one of matching what sorts of institutional responses are best suited to what sorts of environmental problems along with critiques of existing practices the author advances two major new policy recommendations first a system of guardians to represent otherwise voiceless elements in the environment such as species and habitats in the high seas and second a global commons trust fund based on the notion that the atmosphere oceans and space are the common property of all humankind

Surroundings 2020-04-17 how much do we understand about the nature and possible consequences of environmental threats how are individuals industry and governments facing up to the destructive potential of ecological degradation in sustaining earth leading scientists describe and explain the principal environmental threats and their implications eminent statesmen environmentalists and industrialists assess the world's response to these threats in the context of the recommendations of the world commission on environment and development brundtland commission and the concept of sustainable development
