dsm iv and icd 10 both diagnose personality disorders categorically yet studies indicate that many patients meet criteria for an excessive number of diagnoses raising the question of whether personality disorders are discrete conditions or rather distinctions along dimensions of general personality functioning this collection of papers renews long standing proposals for a dimensional model of personality disorder describing alternative models addressing questions about their clinical application and utility and suggesting that future research seek to integrate such models within a common hierarchical structure with contributions by preeminent researchers in the field dimensional models of personality disorders is drawn from a conference series convened by apa who and nih in order to plan for the fifth edition of the dsm the nomenclature work group concluded that consideration should be given to basing part or all of dsm v on dimensions rather than categories and recommended that a dimensional model for personality disorders should serve as a basis for exploring dimensional approaches in other areas accordingly the volume opens with a presentation of 18 proposals for dimensional models and proceeds with provocative contributions on a number of related issues ranging from hard science to clinical practice among the topics addressed are behavioral and molecular genetic research supporting an etiologically informed dimensional classification of personality disorders the as yet tenuous associations
