digital signal processing dsp explained soundguys

Dec 10 2022

a dsp is a processor dedicated to number crunching digital signals like audio they re designed to perform mathematical functions like addition and subtraction at high speed with minimal energy consumption dsp chips appear in a variety of sizes prices and performance points

digital signal processor dsp semiconductor engineering

Nov 09 2022

the dsp is a type of processor optimized for handling signals quickly in real

time which requires specific math operations to be performed quickly and efficiently for instance a dsp will perform some action on the analog signal such as filter and compress analog signals using algorithms
