technology information on the newest cars or the latest breakthroughs in science pm is the ultimate guide to our high tech lifestyle the hover analysis considers pilot attitude and position control tasks in the presence of horizontal gusts the effects of each of the stability derivatives on the difficulty of the control tasks and on the closed loop gust responses are determined it is clearly shown that the handling qualities studies of control sensitivity and angular damping must consider the influences of $m_{sub u}$ or $l_{sub v}$ and should include gust inputs these conclusions are substantiated by previous variable stability helicopter experiments the effects of vehicle size and geometry are investigated by several approaches the key result of increasing size is found to be a reduction in $m_{sub u}$ and $l_{sub v}$ which can in turn lower the requirements for control power and damping the handling qualities during transition of two vehicles a tilt duct and a tilt wing which were previously tested on a simulator are analyzed it is shown that both trim control and perturbations about the trim conditions must be considered in fact part of the increased difficulty in landing transitions in comparison with takeoff transitions is due to more difficult trim control the much more stringent position control requirements in landing are also a contributing factor detailed tips on periodic servicing troubleshooting general maintenance and repair are explicitly outlined in this manual repair is easy with the specifications and step by step repair procedures
