Theories of Theories of Mind

1996-02-23

a state of the art survey of debate within philosophy of mind developmental psychology the aetiology of autism and primatology

Six Theories of Mind

1932

many of the world's leading thinkers have been haunted by the same great philosophical puzzle what is the exact relationship between the body and the mind in lucid prose priest walks readers through the main schools of philosophical thought from plato and descartes to the dualists double aspect theorists and phenomenologists and offers a compelling new solution

Theories of the Mind

1991

in this fascinating book william r uttal raises the possibility that however much we learn about the anatomy and physiology of the brain and psychology we may never be able to cross the final bridge explaining how the mind is produced by the brain three main classes of mind brain theory are considered and rejected field theories because they are based on a superficial analogy single cell theories because they emerge from a massive

uncontrolled experimental program and neural net theories because they are constrained by combinatorial complexity to support his argument uttal explores the empirical and conceptual foundations of these theoretical approaches and identifies flaws in their fundamental logic the author concludes that the problems preventing solution of the mind brain problem are intractable yet well within the confines of natural science

Six Theories of Mind

1901

theory of mind development in context is the first book of its kind to explore how children s environments shape their theory of mind and in turn their ability to interact effectively with others based on world leading research and inspired by the ground breaking work of candida peterson the original collected chapters demonstrate that children s understanding of other people is shaped by their everyday environment specifically the chapters illustrate how theory of mind development varies with broad cultural context socioeconomic status institutional versus home rearing family size parental communication style and aspects of schooling the volume also features research showing that by virtue of their condition children who are deaf or who have an autism spectrum disorder function in environments that differ from those of typical children and this in turn influences their theory of mind although much important research has emphasized

the role of nature in theory of mind development this book highlights that children s understanding of other people is nurtured through their everyday experiences and interactions this perspective is essential for students researchers and practitioners to gain a complete understanding of how this fundamental skill develops in humans the book is invaluable for academic researchers and advanced students in developmental psychology education social psychology cognitive psychology and the social sciences as well as practicing psychologists counselors and psychiatrists particularly those who deal with disorders involving social and or communicative deficits

Neural Theories of Mind

2020-07-24

the articles in this special issue use a wide range of techniques and subject populations to address fundamental questions about the cognitive and neural structure of theory of mind

Theory of Mind Development in Context

2016-11-01

excerpt from a theory of mind the nature of the mind has itself been the cause of this delay in the formation of an acceptable theory for it there is but one method of direct observation of mental

phenomena viz introspection but this method turns out to be almost entirely fruitless the mind is conscious of its own thoughts and of a considerable number of feelings but of its workings of its essence it is quite unconscious we fall into a void as soon as we attempt to observe exactly what is and what goes on in it there is simply nothing to observe about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Causal Theories of Mind

2012-01-19

the theory of mind framework has been the fastest growing body of empirical research in contemporary psychology it has given rise to a range of positions on what it takes to relate to others as intentional beings this book brings together disparate strands of tom research lays out historical roots of the idea and indicates better alternatives

Theories of the Mind

1962

concepts theories and the mind body problem was first published in 1958 minnesota archive editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original university of minnesota press editions this is volume ii of the minnesota studies in the philosophy of science a series published in cooperation with the minnesota center for philosophy of science at the university of minnesota the series editors are herbert feigl and grover maxwell who are also co editors with michael scriven of this volume the ten papers by eleven authors which make up the content of this volume are the result of collaborative research of the center in philosophical and methodological problems of science in general and psychology in particular the contributors are paul oppenheim hilary putnam carl g hempel michael scriven arthur pap wilfrid sellars h gavin alexander p f strawson karl zener herbert feigl and paul e meehl in addition an extensive discussion of internationality and the mental by wilfrid sellars and roderick chisholm is presented in an appendix in a review of this volume the journal psychiatric quarterly commented these essays will not prove easy for the layman to read but he can hardly fail to find his effort rewarded if he is persistent for the professional behavioral scientist increased awareness and caution in his use of scientific language and thinking about scientific

theory should result one of the papers in this volume the mental and the physical by herbert feigl has been published by the university of minnesota press with further discussion by dr feigl as a separate book the mental and the physical the essay and a postscript

Theory of Mind

2007

developmental psychologists coined the term theory of mind to describe how we understand our shifting mental states in daily life over the past twenty years researchers have provided rich provocative data showing that from an early age children develop a sophisticated and consistent theory of mind by attributing their desires beliefs and emotions to themselves and to others remarkably infants barely a few months old are able to attend closely to other humans two year olds can articulate the desires and feelings of others and comfort those in distress and three and four year olds can talk about thoughts abstractly and engage in lies and trickery this book provides a deeper examination of how theory of mind develops building on his pioneering research in the child s theory of mind 1990 henry m wellman reports on all that we have learned in the past twenty years with chapters on evolution and the brain bases of theory of mind and updated explanations of theory theory and later theoretical developments including how children conceive of extraordinary minds such as those belonging to superheroes or

supernatural beings engaging and accessibly written wellman s work will appeal especially to scholars and students working in psychology philosophy cultural studies and social cognition

A Theory of Mind (Classic Reprint)

2018-02-02

in this book william r uttal continues his analysis and critique of theories of mind this book considers theories that are based on macroneural responses such as those obtained from fmri that represent the averaged or cumulative responses of many neurons the analysis is carried out with special emphasis on the logical and conceptual difficulties in developing a theory but with special attention to some of the current attempts to go from these cumulative responses to explanations of the grand question of how the mind is generated by the brain while acknowledging the importance of these macroneural techniques in the study of the anatomy and physiology of the brain uttal concludes that this macroneural approach is not likely to produce a valid neural theory of cognition because the critical information the states of the individual neurons involved in brain activity becoming mental activity is actually lost in the process of summation controversial topics are considered in detail including discussions of empirical logical and technological barriers to theory building in cognitive neuroscience

Against Theory of Mind

2009-03-19

topics covered include dualism versus the various forms of materialism personal identity and survival and the problem of other minds show more show less

Concepts, Theories, and the Mind-Body Problem

1958

this book is not a conventional introduction to the philosophy of mind nor is it a contribution to the physicalist dualist debate instead the representational theory of mind demonstrates that we can construct physicalist theories of important aspects of our mental life its aim is to explain and defend a physicalist theory of intelligence in two parts the first six chapters consist of an exposition elaboration and defence of human sentience the functionalist theory of mind and the second part considers rivals and objections to this theory kim sterelny aims to introduce people to this area of philosophy by exemplifying it to show that philosophical and empirical investigations can be synthesized to the benefit of both it is both introduction and argument explanation and manifesto and succeeds in bridging the widening gap between student primer and contemporary research technical vocabulary is

explained and defined in a glossary while the leading edge of current debates is confronted and assessed this book has been written for people working in philosophy psychology and the cognitive sciences

Making Minds

2014-10-09

theories of theories of mind brings together contributions by a distinguished international team of philosophers psychologists and primatologists who among them address such questions as what is it to understand the thoughts feelings and intentions of other people how does such an understanding develop in the normal child why unusually does it fail to develop is any such mentalistic understanding shared by members of other species

Macroneural Theories in Cognitive Neuroscience

2015-07-24

theory of mind precursors lifespan development expression and in human robot interactionstheory of mind tom the ability to attribute mental states to oneself and to others is known to develop from infancy and to improve markedly in early childhood what we don't know is how tom develops changes and expresses itself after early childhood and across

the lifespan the contributions in this volume aim to further our understanding in this field they include a systematic review of longitudinal research that identifies several precursors to cognitive development including cognitive abilities and behavioral experiences there is also a look at the associations between age executive function and life history the recognition that prior life experiences influence how individuals think feel and make decisions about the future in addition human robot interaction is investigated as humans of all ages ascribe mental states to robots the more human a robot appears and acts the more like me we view and treat it

Introducing Persons

1986-01-01

presents a critical survey of the theory of self knowledge and consciousness

Mindreaders

2011

an introduction to the philosophy of mind provides a lively and accessible introduction to all the main themes and arguments currently being debated in this area the book examines and criticizes four major theories of mind dualism mind brain identity behaviourism and functionalism it argues that while consciousness and our mental lives depend upon physical processes in the brain they are not

reducible to those processes the differences between mental and physical states mind body causality the problem of other minds and personal identity are also explored in full the second edition of this well respected text has been revised to include a new chapter which explores aristotle s philosophy of psychology and mind it also includes new material on the turing test and has been expanded and updated throughout the book is designed to help students think for themselves about all the issues identified above and contains exercises throughout the text to stimulate and challenge the reader objectives are clearly set out at the start of every chapter to enable students to check their understanding as they proceed and each chapter ends with questions to consider there are discussions of the most cited contemporary writers in the field so that the reader can gain a rounded perspective of the debates

History and Theories of the Mind

2008

an historical overview and evaluation of modern psychology s theoretical foundations mind ranges from descartes to dynamics in its discussion of such topics as introspectionism psychoanalysis behaviorism and the varieties of contemporary cognitive science throughout these theories are examined and assessed as attempts to construct an overall conception of the perso as general theories of human nature

The Representational Theory of Mind

1991-01-08

theory of mind is what enables us to put ourselves in another's shoes it is mindreading empathy creative imagination of another's perspective in short it is simultaneously a highly sophisticated ability and a very basic necessity for human communication theory of mind is central to such commercial endeavors as market research and product development but it is also just as important in maintaining human relations over a cup of coffee not surprisingly it is a critical tool in reading and understanding literature which abounds with characters situations and other people's shoes furthermore it is becoming increasingly apparent that reading literature also hones these critical mindreading skills theory of mind and literature is a collection of nineteen essays by prominent scholars linguists cognitive scientists and philosophers working in the cutting edge field of cognitive literary studies which explores how we use theory of mind in reading and understanding literature

Theories of Theories of Mind

1996-02-23

metaphors of mind seeks to help readers understand human intelligence as viewed from a variety of

standpoints such as those of psychology anthropology computational science sociology and philosophy much of the present confusion surrounding the concept of intelligence stems from our having looked at it from these different standpoints without considering how they relate to each other or how they might be combined into a unified view that goes beyond the boundaries of a particular discipline readers of metaphors of mind will come away with a comprehensive understanding of the concept of intelligence and how ideas about it have evolved and are continuing to evolve

Theory of Mind Across the Lifespan

2018-04-09

believing that mind body theories will offer a unified account of mind in its relation to body cynthia macdonald traces the complex history of this theory and focuses on the different arguments of j j c smart and david lewis among others

The Opacity of Mind

2011-09-15

cognitive systems and the extended mind surveys philosophical issues raised by the situated movement in cognitive science that is the treatment of cognitive phenomena as the joint products of brain body and environment

An Introduction to the Philosophy of Mind

2007-07-16

can neurophysiology ever reveal to us what it is like to smell a skunk or to experience pain in what does the feeling of happiness consist how is it that changes in the white and gray matter composing our brains generate subjective sensations and feelings these are several of the questions that michael tye addresses while formulating a new and enlightening theory about the phenomenal what it feels like aspect of consciousness the test of any such theory according to tye lies in how well it handles ten critical problems of consciousness tye argues that all experiences and all feelings represent things and that their phenomenal aspects are to be understood in terms of what they represent he develops this representational approach to consciousness in detail with great ingenuity and originality in the book s first part tye lays out the domain the ten problems and an associated paradox along with all the theories currently available and the difficulties they face in part two he develops his intentionalist approach to consciousness special summaries are provided in boxes and the ten problems are illustrated with cartoons a bradford book representation and mind series

Mind

2006-01-01

writing in a rigorous thought provoking style the author takes us on a far reaching tour through the philosophical ramifications of consciousness offering provocative insights into the relationship between mind and brain

Theory of Mind and Literature

2010-01-15

books or articles about theory of mind often begin with an example that helps to convey what is meant by the term e g derksen hunsche giroux connolly bernstein 2018 miller 2012 wellman 2014 this book will be no exception

Six Theories of Mind

1946

jerry fodor argues against the widely held view that mental processes are largely computations that the architecture of cognition is massively modular and that the explanation of our innate mental structure is basically darwinian

Metaphors of Mind

1990-07-27

essay from the year 2008 in the subject psychology general grade 1 7 university of derby institut für psychologie course cognitive psychology language english abstract in psychology many theories and models use process charts resembling circuit diagrams of technical devices in this account human behaviour and experience appears to be the result of processes taking place in the black box named cognition in this context computationalism is the view that computation can offer an explanatory basis for cognition davenport 2008 p 1 the computational theory of mind ctm has developed on this foundation attempting to reveal what is inside this black box in contrast human consciousness being a part of cognition harnad 1994 seems to be beyond any scientific explanation this essay will critically discuss the extent to which consciousness poses a problem for the ctm regarding issues surrounding consciousness as an area of scientific study the extent to which consciousness is explicable in computational terms explanations of consciousness and dennett s 1991 different account to consciousness it will be argued that consciousness does pose a major problem for the ctm especially when it is conceptualised as subjective experience it will conclude that cognitive science should presently focus only on certain aspects of consciousness called the easy problems

Mind-body Identity Theories

1989

this book a companion to william r uttal s earlier work on macrotheories theories of mind brain relationships reviews another set of theories those based on microneuronal measurements microneural theories maintain the integrity of individual neurons either in isolation or as participants in the great neuronal networks that make up the physical brain despite an almost universal acceptance by cognitive neuroscientists that the intangible mind must in some way be encoded by network states uttal shows that the problem of how the transformation occurs is not yet supported by empirical research findings at the micro as well as at the macro levels of analysis theories of the neuronal network survive more as metaphors than as robust explanations this book also places special emphasis on the technological developments that stimulate these metaphors a major conclusion drawn in this book is that it is not at all certain that the mind brain problem is solvable in the sense that many other grand scientific problems are

Cognitive Systems and the Extended Mind

2009-08-19

the big question of how and why mindedness evolved necessitates collaborative multidisciplinary investigation biosemiotics provides a new conceptual space that attracts a multitude of thinkers in the biological and cognitive sciences and the humanities who recognize continuity in the

biosphere from the simplest to the most complex organisms and who are united in the project of trying to account for even language and human consciousness in this comprehensive picture of life the young interdisciplinary of biosemiotics has so far by and large focused on codes signs and sign processes in the microworld a fact that reflects the field's strong representation in microbiology and embryology what philosophers of mind and cognitive scientists can contribute to the growing interdisciplinary are insights into how the biosemiotic weltanschauung applies to complex organisms like humans where such signs and sign processes constitute human society and culture

Ten Problems of Consciousness

1997-01-22

the philosophy of mind is unique among contemporary philosophical subjects writes john searle in that all of the most famous and influential theories are false one of the world's most eminent thinkers searle dismantles these theories as he presents a vividly written comprehensive introduction to the mind he begins with a look at the twelve problems of philosophy of mind which he calls descartes and other disasters problems which he returns to throughout the volume as he illuminates such topics as materialism consciousness the mind body problem intentionality mental causation free will and the self the book offers a refreshingly direct and engaging introduction to one of the most

intriguing areas of philosophy

The Conscious Mind

1997

what exactly do children understand about the mind and when does that understanding first emerge in this groundbreaking book karen bartsch and henry wellman answer these questions and much more by taking a probing look at what children themselves have to tell us about their evolving conceptions of people and their mental lives by examining more than 200 000 everyday conversations sampled from ten children between the ages of two and five years the authors advance a comprehensive naive theory of mind that incorporates both early desire and belief desire theories to trace childhood development through its several stages throughout the book offers a splendidly written account of extensive original findings and critical new insights that will be eagerly read by students and researchers in developmental psychology cognitive psychology philosophy and psycholinguistics
