Operative Manual of Endoscopic Surgery 2013-06-29

in putting together this manual of endoscopic surgery we have sought to cover the three essential components of the new surgical approach the technological aspects the basic endoscopic surgical skills and the operative techniques visualization of the

operative field exposure and execution of remote manipulations are dependent on optimal function of the ancillary apparatus without which endoscopic surgery cannot be practised familiarity of the surgeon with the basic physical principles of the various devices employed in this technology dependent form of surgery ensures safe use prolonged equipment life and smooth execution of surgical endoscopic interventions equally important is the acquisition of the basic skills of endoscopic surgical practice since these differ in several important respects from those of conventional open surgery mastery of the craft of endoscopic surgery requires a determined commitment to training and is no easy option but once acquired is rewarded by the extreme professional satisfaction experienced when one witnesses the remarkable progress of patients who have undergone major surgical interventions with minimal discomfort and pain lower morbidity and rapid return to gainful employment the new approach has taken the sting out of surgical treatment and made it more acceptable to our patients quite apart from cost considerations this aspect alone justifies the extra effort and investment needed for the further advancement of endoscopic surgery our task in compiling this operative manual was thus an ambitious one

Plant Tissue Culture Manual - Supplement 7 *2013-11-11*

plant tissue culture has a long history dating back to the work of gottlieb haberlandt and others at the end of the 19th century but the associated concepts and techniques have reached a level of usefulness and application which has never been greater the technical innovations have given new insights into fundamental aspects of plant differentiation and development and have paved the way to the identification of strategies for the genetic manipulation of plants it is the aim of this manual to deliver a broad range of these techniques in a form which is accessible to students and research scientists of diverse backgrounds including those with little or no previous experience the themes of the manual aim to reflect those research areas which have been advanced by tissue culture technology as was the case for the sister volume plant molecular biology manual the objective has been from the start to produce a manual

which is at home on the laboratory bench the plastic covered ring bound format has proved to be most popular and is retained here equally the emphasis has been on producing a collection of detailed step by step protocols each supplemented with an introductory text and practical footnotes to provide the next best thing to a supervisor at one s shoulder
