excerpt from kirkes handbook of physiology in this the ninth edition of the handbook the chapter on nutrition has been revised to call attention to the very fundamental work of osborne and mendel on food factors necessary for growth and of funk voegtlin and others on the vitamins and nutritional diseases the giant strides of the science of physiology during recent years make it difficult to keep pace with the literature but it is hoped that the facts and principles that have received acceptance have been incorporated in so far as the limitations of the available space permit many of the discussions and illustrative laboratory experiments have been rewritten and improvements simplifying the technique have been incorporated it is felt that the student in physiology gains the greatest strength in his laboratory experiments when the tests he executes are chosen from the standpoint of the pedagogical efficiency of the entire work in this field under the present day conditions the determining pedagogical horizon includes not only the subject matter of physiology but that of the field of clinical medicine and surgery for which physiology furnishes the foundation for valuable aids and criticisms in this and recent editions i again acknowledge grateful indebtedness to professor c m jackson university of minnesota professor r b gibson university of the philippines to my colleague professor a gulick and to dr t k kruse of the university of pittsburg about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
