this document sets out appropriate test methods for measuring the performance of a cleanroom a clean zone or an associated controlled environment including separative devices and controlled zones together with all associated structures air treatment systems services and utilities this second edition of iso 14644 3 cancels and replaces the first edition iso 14644 3 2005 which has been technically revised the main changes compared to the previous edition are as follows clause b 7 has been simplified and corrected to address concerns over its complexity and noted errors this document provides test methods in support of the operation for cleanrooms and clean zones to meet air cleanliness classification other cleanliness attributes and related controlled conditions learn more about iso 14644 3 2019 cleanrooms test methods including key changes and buy pdf standard from ansi the iso us member body selected tests can also be repeated on a regular basis as part of a routine facility monitoring program see iso 14644 2 guidelines for the selection of tests and a checklist of tests are given in annex a test methods are outlined in annex b the test methods described in annex b are in outline form only iso 14644 consists of the following parts under the general title cleanrooms and associated controlled environments part 1 classification of air cleanliness part 2 specifications for testing and monitoring to prove continued compliance with iso 14644 1 part 3 test methods part 4 design construction and start up iso 14644 3 2005 specifies test methods for designated classification of airborne particulate cleanliness and for characterizing the performance of cleanrooms and clean zones the iso 14644 3 standard provides two methods for calculating cleanroom recovery performance the 100 1 recovery time method is simply a direct measurement of the time required for the cleanroom to recover from an aerosol challenge 100 times the target cleanliness level this part of iso 14644 specifies a methodology to assess the suitability of equipment e g machinery measuring equipment process equipment components and tools for use in cleanrooms and associated controlled environments with respect to airborne particle cleanliness as specified in iso 14644 1 iso 14644 5 provides the basic requirements for operating and maintaining cleanrooms and associated controlled environments this standard addresses requirements that are basic to the operation of all cleanrooms regardless of the application part 14644 3 specifies the test methods that support the operation of the controlled environment to meet the relevant air cleanliness classification attributes and related conditions test methods depend on the airflow characteristics and occupancy states of the controlled environment iso 14644 3 published by iso in august 2019 updates textbook guidance that has been in use since 2005 performance tests are specified for two types of cleanrooms unidirectional and non unidirectional in three occupancy states as built at rest and operational this part of iso 14644 specifies the classification of air cleanliness in terms of concentration of airborne particles in cleanrooms and clean zones and separative devices as defined in iso 14644 7 performance tests are specified for two types of cleanrooms and clean zones those with unidirectional flow and those with non unidirectional flow in three possible occupancy states as built at rest and operational the test methods recommend test apparatus and test procedures for determining performance parameters method of assessing level of cleanliness against a specification for a cleanroom 3 1 4 clean zone 3 1 5 controlled zone or a defined location therein note 1 to entry levels should be expressed in terms of an iso class which represents maximum allowable concentrations of particles in a unit volume of air key changes to bs en iso 14644 3 2019 cleanrooms and
