Optics has become one of the most dynamic fields of science since the first volume of progress in optics was published forty years ago at the time of inception of this series the first lasers were only just becoming operational holography was in its infancy subjects such as fiber optics integrated optics and optoelectronics did not exist and quantum optics was the domain of only a few physicists the term photonics had not yet been coined today these fields are flourishing and have become areas of specialisation for many science and engineering students and numerous research workers and engineers throughout the world some of the advances in these fields have been recognized by awarding nobel prizes to seven physicists in the last twenty years the volumes in this series which have appeared up to now contain 240 review articles by distinguished research workers which have become permanent records for many important developments they have helped optical scientists and optical engineers to stay abreast of their fields there is no sign that developments in optics are slowing down or becoming less interesting we confidently expect that just like their predecessors future volumes of progress in optics will faithfully record the most important advances that are being made in optics and related fields

Distinguished linguistics scholar Anatoly Liberman set out the frame for this volume in an analytic dictionary of English etymology here Liberman's landmark scholarship lay the groundwork for his forthcoming multivolume analytic dictionary of the English language a bibliography of English etymology is a broadly conceptualized reference tool that provides source materials for etymological research for each word's etymology there is a bibliographic entry that lists the word origin's primary sources specifically where it was first found in use featuring the history of more than 13 000 English words their cognates and their foreign antonyms this is a full fledged compendium of resources indispensable to any scholar of word origins
