there is widespread agreement among large segments of western society that we are living in a period of hard times at first glance such a belief might seem exceedingly odd after all persons in western society find themselves living in a time of unprecedented material abundance hunger and disease evils all too familiar to the members of earlier generations although far from eradicated from modern life are plainly on the wane persons alive today can look forward to healthier longer and more comfortable lives than those of their grand parents nevertheless the feeling that life today is especially difficult is rampant in government in the media in popular books and in academic circles western society is perceived in many quarters as wracked by crises of all sorts of faith of power of authority of social turmoil of declining quality in workmanship and products and of a general intellectual malaise afflicting both those on the left and the right a tone of crisis permeates the language of public life editorials in major newspapers are full of dire warnings about the dangers of unbridled egoism avarice

although this book is a study of the work of emmanuel levinas and jacques derrida it would be mistaken to refer to it as a comparison the book develops a framework which might aide the reader of levinas and derrida in determining the scope and significance of their respective projects as far as a discourse of the sacred is concerned it does so by emphasizing their status as philosophers whose thought correlates but does not compare within this correlation without obscuring either their differences or similarities we can see a common framework that consists of the following elements first it is clear from what and how derrida and levinas have written that the general import of their work lies in the area of ethics however in many ways it would be justifiable to say that their work is not about ethics at all neither of them proposes a moral theory neither is interested in discussing the question of values vs social norms duty vs virtue and other issues that might pertain to the area

of ethics to be sure these issues do come up in their work yet they are treated in a peculiarly different way for derrida and levinas ethics is not so much an inquiry into the problems of right and wrong but an inquiry into the problem of the ethical constitutedness of human beings

some planners limit discussions of ethics to simple though important questions about the propriety of their daily activities this approach to ethics restricts discussion of professional ethics to the propriety of everyday social and professional relationships it ignores the broader ethical content of planning practice methods and policies while narrow definitions of ethical behavior can easily preoccupy public officials and professional associations they divert attention from more profound moral issues martin wachs argues that ethical issues are implicit in nearly all planning decisions for illustrative and educational reasons it is useful to divide ethics in planning into four distinct categories the first category includes the moral implications of bureaucratic practices and rules of behavior regarding clients and supervisors the second category includes ethical judgments which planners make in exercising their administrative discretion more complex and represented by a third category are the moral implications of methods and the ethical content of criteria built into planning techniques and models the final type represents the basic choices which society makes those inherent in the consideration of major policy alternatives ethics in planning contains a variety of representative papers to capture the current state of thinking this book will be important as a text for survey classes in professional ethics given by university planning programs it should also supplement short courses in planning ethics for practicing professionals and provide source materials for discussions of

planning ethics sponsored by local chapters of the american planning association and similar organizations it gathers together exemplary and critical works thus it will also interest individual planners in a field that only continues to grow in recognition and importance

a classic work in the field of practical and professional ethics this collection of nine essays by english philosopher and educator henry sidgwick 1838 1900 was first published in 1898 and forms a vital complement to sidgwick s major treatise on moral theory the methods of ethics reissued here as volume one in a new series sponsored by the association for practical and professional ethics the book is composed chiefly of addresses to members of two ethical societies that sidgwick helped to found in cambridge and london in the 1880s clear taut and lively these essays demonstrate the compassion and calm reasonableness that sidgwick brought to all his writings as sidgwick explains in his opening essay the societies he addressed aimed to allow academics professionals and others to pursue joint efforts at reaching some results of value for practical guidance and life sidgwick hoped that members might discuss such questions as when if ever public officials might be justified in lying or in breaking promises whether scientists could legitimately inflict suffering on animals for research purposes when nations might have just cause in going to war and a score of other issues of ethics in public and private life still debated a century later this valuable reissue returns practical ethics to its rightful place in sidgwick s oeuvre noted ethicist sissela bok provides a superb introduction ranging over the course of sidgwick s life and career and underscoring the relevance of practical ethics to contemporary debate she writes practical ethics the last book that henry sidgwick published

before his death in 1900 contains the distillation of a lifetime of reflection on ethics and on what it would take for ethical debate to be really of use in the solution of practical questions this rich engaging work is essential reading for all concerned with the relationship between ethical theory and practice and with the questions that have driven the study of professional ethics in recent years

the forces generated by an explosion in human knowledge and exponential increases in technology have brought about tectonic shifts in personal as well as corporate worldviews and while globalisation has ushered in many benefits for companies and consumers alike this book posits that it is the fierce competition of global market places which drives the largely unopposed belief that firms exist solely to enhance shareholder value the author in arguing for a wider definition of shareholder is of the opinion that this is a potentially lethal fallout because single minded pursuit of profit for profits sake in

yielding to the tyranny of the bottomline has undermined traditional and long enduring value systems and placed ethics on the sacrificial altar of vested interests as scams such as enron worldcom and computer associates have amply demonstrated to bolster his arguments the author compels the reader to think assess and analyse for himself as he whisks him through a whirlwind tour of western ethical and value systems beginning from the halcyon days of plato and aristotle right down to modern times running the gamut of newton hobbes descartes js mill followed by the utilitarians kant hegel and even the jack welch model he then guides the reader the labyrinth of eastern thought including vedic and taoist disciplines before citing three pragmatic indian models with firm philosophical underpinnings one of which he zeroes in as having the greatest potential for good governance written in a very lucid style this book is sure to remain fresh in the reader s memory as long as questions of right and wrong confront him in his daily life no book on the subject can hope to do more
