polymer composites is the engineering and scientific journal serving the fields of reinforced plastics and polymer composites including research production processing and applications spe editor s choice articles 2023 editor s choice article may 2024 issue 45 7 polymer composite materials were reinforced by organic and or inorganic fibers and formulated by various fillers composite materials have an excellent mechanical and thermal properties composite materials have a best abrasion resistance and exceptional electric insulation polymers polymer composites provides a forum for the publication of expertly peer reviewed international research into the following topics fibre reinforced and particulate filled plastics engineering plastics nanocomposites polymers or polyblends intended for engineering use including structural load bearing electronic and electrical polymer composites are polymer materials with a reinforcement in which the polymer acts as a matrix resin that penetrates the reinforcement bundles and bonds to the reinforcement polymer composite materials are used mainly in automotive and aerospace applications and this chapter focuses on automotive polymer composites the most common of this special collection focuses on how new and enhanced functions can be realised by sustainable polymer composites which are formed by mainly polymer blending inclusion of small amounts of nanofillers or loading with active ingredients coupled with chemical functionalisation or specialised materials fabrication procedures polymer
