Dr. James W. Kalat's *Biological Psychology*, 11th International Edition, is the most widely used text in the course area and for good reason: an extremely high level of scholarship, clear and occasionally humorous writing style, and precise examples throughout all eleven editions. Kalat's goal has been to make biological psychology accessible to psychology students, not just to biology majors and pre-meds. Another goal has been to convey the excitement of the search for biological explanations of behavior, and Kalat delivers, updated with new topics, examples, and recent research findings, and supported by a strong media package. This text speaks to today's students and instructors. The last two decades have seen two significant trends emerging within the philosophy of science: the rapid development and focus on the philosophy of the specialised sciences and a resurgence of Aristotelian metaphysics, much of which is concerned with the possibility of emergence, as well as the ontological status and indispensability of dispositions and powers in science. Despite these recent trends, few Aristotelian metaphysicians have engaged directly with the philosophy of the specialised sciences. Additionally, the relationship between fundamental Aristotelian concepts such as hylomorphism, substance, and faculties and contemporary science has yet to receive a critical and systematic treatment. *Neo-Aristotelian Perspectives on Contemporary Science* aims to fill this gap in the literature by bringing together essays on the relationship between Aristotelianism and science that cut across interdisciplinary boundaries. The chapters in this volume are divided into two main sections covering the philosophy of physics and the philosophy of the life sciences, featuring original contributions from distinguished and early-career scholars. This book will be of interest to specialists in analytical metaphysics and the philosophy of science. This book is meant for graduate-level MCA/B.Tech students and also as per the syllabus of all India Council of Technical Education (AICTE) under Emerging Technology, which covers more than 10,000 colleges with pan-India presence. Book from an author who has written more than 100 books, first in India on computer science and information technology, including all levels of DOEACC/DAC. His book *Big Data and Hadoop* was released by a past president of the Institution of Electronics and Telecommunication Engineers. Books already written on Big Data Analytics, Data Science, and Machine Learning are already approved by AICTE.
