the past few years have seen significant change in the landscape of high end network processing in response to the formidable challenges facing this emerging field the editors of this series set out to survey the latest research and practices in the design programming and use of network processors through chapters on hardware software performance and modeling volume 3 illustrates the potential for new np applications helping to lay a theoretical

foundation for the architecture evaluation and programming of networking processors like volume 2 of the series volume 3 further shifts the focus from achieving higher levels of packet processing performance to addressing other critical factors such as ease of programming application developments power and performance prediction in addition volume 3 emphasizes forward looking leading edge research in the areas of architecture tools and techniques and applications such as high speed intrusion detection and prevention system design and the implementation of new interconnect standards investigates current applications of network processor technology at intel infineon technologies and netmodule presents current research in network processor design in three distinct areas architecture at washington university st louis oregon health and science university university of georgia and north carolina state university tools and techniques at university of texas austin academy of sciences china university of paderborn germany and university of massachusetts amherst applications at university of california berkeley universidad complutense de madrid spain eth zurich switzerland georgia institute of technology vrije universiteit the netherlands and universiteit leiden the netherlands
