Growth and Yield in Managed Natural Stands of Loblolly and Shortleaf Pine in the West Gulf Coastal Plain 1979 this report explores criteria and indicators c i for monitoring and assessing the sustainability of community managed forests cmfs and offers some insights into methodological tools and conceptual approaches for c i development the research was intended to explore the potential value of c i to forest communities their partners and their representative organisations to legitimise and enhance management including strengthening of control over forest resources and facilitating the equitable distribution of the costs and benefits of forest management the c i for cmf tests involved six forest communities and their partners in central province cameroon the amazonian state of par brazil and west kalimantan indonesia each test was of approximately one month duration the core teams included an ecologist a social scientist and a forest management specialist local involvement was an essential element of the research process facilitators enabled the active participation of community members in the critical appraisal of the c i after each field test academics policy makers representatives of local and national non governmental organisations and representatives of other forest communities reviewed the emergent draft c i over 750 statements of principles criteria indicators and verifiers were generated by the tests there is an evaluation of c i testing processes and c i for cmf development methodologies as well as an analysis of the c i for cmf the comprehensive coverage of issues related to the sustainability of cmfs makes this report a valuable reference for those interested in implementing c i for cmf and for other users and purposes these may include researchers or policy makers analysing intersectoral impacts on cmfs practitioners assessing and developing collaborative cmf initiatives development planners and project managers evaluating or planning initiatives and professors seeking guidance on incorporating community forestry into curricula for rural development forestry and anthropology students

Simulation of Growth of Managed Forests in the Atlantic Zone of Costa Rica and Analysis of Nutrient Cycling to Determine Surpluses and Shortages 2000 more than twenty years ago the food and agriculture organization of the united nations contributed to the growing recognition of the role of pollination in agricultural production with the publication of the pollination of cultivated plants in the tropics since that time the appreciation of pollinators has grown alongside the realization that we stand to lose them but our knowledge and understanding of crop pollination pollinator biology and best management practices has also expanded over this time this volume is the first of two compendiums for practitioners sharing expert knowledge on all dimensions of crop pollination in both temperate and tropical zones the focus in this first volume is on applied crop and system specific pollination

Developing criteria and indicators of community managed forests as assessment and learning tools: objectives, methodologies and results 2018-10-15 at the meeting of the international tropical timber organization held in bali in 1990 itto adopted the target of ensuring that all tropical timber marketed internationally should by the year 2000 come from forests that are managed sustainably this study is an attempt to determine whether the member countries of the itto have a legal and administrative basis for managing their production forests in ways which will allow these forests to contribute to biological diversity conservation it also attempts to assess the extent to which such management is already applied on the ground through member country studies a set of guidelines on ways in which management of production forests could be improved is included

The pollination of cultivated plants: A compendium for practitioners 1979 the theme of the present volume concerns people s response to the natural environment considered at scales varying from that of a house hold plant to that of vast wilderness areas our decision to focus on this particular segment of the physical environment was prompted in part by the intrinsic interest in this subject on the part of a diverse group of sodal scientists and professionals and of laypersons for that matter and in part by the relative neglect of this topic in standard treatments of the environment behavior field it also serves to bring out once again the interdisiplinary nature of that field and we are pleased to have been able to include representatives from geography sodology soda ecology and natural recreation among our contributors we believe that this volume will serve a useful purpose in helping to integrate the find ings and concepts in this presently somewhat fragmented field scat tered as they are over a very diverse array of publications representing a similarly varied group of spedalties it is hoped that the result will be to stimulate future development of this area and to add a measure of in creased coherence to it volume 7 of our series will be devoted to the theme of elderly people and the environment with m powell lawton joining us as guest co editor the titles of the papers comprising volume 7 are shown on page v irwin altman j oachim f wohlwill ix contents introduction

General Technical Report RM. 1983 with unprecedented attention on global change the current debate revolves around the availability and sustainability of natural resources and how to achieve equilibrium between what society demands from natural environments and what the natural resource base can provide a full understanding of the range of issues from the consequences of the changing resource bases to the degradation of ecological integrity and the sustainability of life is crucial to the process of developing solutions to this complex challenge authored by world class scientists and scholars the encyclopedia of natural resources provides an authoritative reference on a broad spectrum of topics such as the forcing factors and habitats of life their histories current status and future trends and their societal connections economic values and management the content presents state of the art science and technology development and perspectives of resource management written and designed with a broad audience in mind the entries clearly elucidate the issues for readers at all levels without sacrificing the scientific rigor required by professionals in the field volume i land includes 98 entries that cover the topical areas of renewable and nonrenewable natural resources such as forest and vegetative soil terrestrial coastal and inland wetlands landscape structure and function and change biological diversity ecosystem services protected areas and management natural resource economics and resource security and sustainability natural resources represent such a broad scope of complex

and challenging topics that a reference book must cover a vast number of subjects in order to be titled an encyclopedia the encyclopedia of natural resources does just that the topics covered help you face current and future issues in the maintenance of clean air and water as well as the preservation of land resources and native biodiversity also available online this taylor francis encyclopedia is also available through online subscription offering a variety of extra benefits for researchers students and librarians including citation tracking and alerts active reference linking saved searches and marked lists html and pdf format options contact taylor and francis for more information or to inquire about subscription options and print online combination packages us tel 1 888 318 2367 e mail e reference taylorandfrancis com international tel 44 0 20 7017 6062 e mail online sales tandf co uk

Wildlife Habitats in Managed Rangelands 1992 a leader s role in the management of change is a critical issue for successful outcomes of strategic initiatives globalization and economic instability have prompted an increase in organizational changes related to downsizing and restructuring in order to improve financial performance and organizational competitiveness researchers agree that a leader s inability to fully understand what is needed in order to guide their organization through successful change can be a reason for failure proper planning and management of change can reduce the likelihood of failure promote change effectiveness and increase employee engagement yet change in organizations must be viewed as a continuous activity that affects both organizational and individual outcomes if change management can be considered as an event induced by socio cultural factors the cultural variable gains greater significance when applied to the quality of the relationship between a leader and their team many organizations today are on the verge of internationalization it is here that the cultural context can affect behaviors and in the same way leadership style the research presented in this book by an eminent group of scholars explores the influence of culture ethnic regional religious on how leaders manage change within organizations

Conserving Biological Diversity in Managed Tropical Forests 2008 this textbook is written to bring about an awareness of a variety of environmental concerns it covers a wide range of topics and issues about environmental science it attempts to create a pro environmental attitude and a behavioral pattern in society that is based on creating sustainable lifestyles but a textbook can hardly be expected to achieve a total behavioral change in society conservation is best brought about through creating a love for nature

*Volume 1: Compilation of Water Pollution, Environmental Protection, and Related Laws, (110-149), May 30, 2008, 110-2 Committee Print, * 1987* historically the high population density and small land base characteristic of the netherlands have demanded the development of judicious and in many cases multi purpose land management in developing environmentally sound land use systems we have learned that the natural landscape cannot be maintained without the whole heart support and participation of the local populations today analogous conditions of high population pressure in many of the tropical developing countries continue to threaten that landscape especially the tropical moist forests with degradation and destruction the netherlands experience in developing intensive people oriented land use systems plus its long tradition in silvicultural and biological research in tropical forestry have provided this study on the management of moist tropical forest as a contribution to international co operation

Modoc National Forest (N.F.), Land and Resource(s) Management Plan (LRMP) 2001 this volume deals with land degradation which is occurring in almost all terrestrial biomes and agro ecologies in both low and high income countries and is stretching to about 30 of the total global land area about three billion people reside in these degraded lands however the impact of land degradation is especially severe on livelihoods of the poor who heavily depend on natural resources the annual global cost of land degradation due to land use and cover change lucc and lower cropland and rangeland productivity is estimated to be about 300 billion usd sub saharan africa ssa accounts for the largest share 22 of the total global cost of land degradation only about 38 of the cost of land degradation due to lucc which accounts for 78 of the us 300 billion loss is borne by land users and the remaining share 62 is borne by consumers of ecosystem services off the farm the results in this volume indicate that reversing land degradation trends makes both economic sense and has multiple social and environmental benefits on average one us dollar investment into restoration of degraded land returns five us dollars the findings of the country case studies call for increased investments into the rehabilitation and restoration of degraded lands including through such institutional and policy measures as strengthening community participation for sustainable land management enhancing government effectiveness and rule of law improving access to markets and rural services and securing land tenure the assessment in this volume has been conducted at a time when there is an elevated interest in private land investments and when global efforts to achieve sustainable development objectives have intensified in this regard the results of this volume can contribute significantly to the ongoing policy debate and efforts to design strategies for achieving sustainable development goals and related efforts to address land degradation and halt biodiversity loss

Lakeview Resource Management Plan 2012-12-06 includes another issue of 1936 ed without ill
Behavior and the Natural Environment 2014-07-23 this book focuses on the highly touristed but surprisingly under researched lesser antilles region after offering a brief overview of the region s geologic and tectonic history as well as its basic climatology subsequent chapters then discuss each island s or island set s geomorphology and geology and how the settlement history tourism and hazards have affected their individual landscapes written by regional experts and replete with up to date information stunning color imagery and beautiful cartography maps it is the only comprehensive scientific evaluation of the lesser antilles and serves as the region s definitive reference resource accessible to non experts and amateur explorers the book includes in depth discussions and reference sections for each island island set usable as both a textbook and guidebook it offers readers a straightforward yet detailed assessment of an interesting and intriguing but often overlooked and under appreciated locale

Encyclopedia of Natural Resources - Land - Volume I 1995 a detailed assessment of environmental impacts associated with the establishment of the proposed park and the management of the land includes an inventory of the resources of the area

United States Code 2000 this is an open access title available under the terms of a cc by nc nd 4.0 international licence it is free to read at oxford scholarship online and offered as a free pdf download from oup and selected open access locations rising inequality and widespread poverty social unrest and polarization gender and ethnic disparities declining social mobility economic fragility unbalanced growth due to technology and globalization and existential danger from climate change are urgent global concerns of our day these issues are intertwined they therefore require a holistic framework to examine their interplay and bring the various strands together leading academic economists have partnered with experts from several international institutions to explain the sources and scale of these challenges they gather a wide array of empirical evidence and country experiences to lay out practical policy solutions and to devise a comprehensive and unified plan of action for combatting these economic and social disparities this authoritative book is accessible to policy makers students and the general public interested in how to craft a brighter future by building a sustainable green and inclusive society in the years ahead
