~~are clear illustrations for connecting the mouse power supply~~
and ethernet connection the quick start also illustrates use
of the main screen controls for volume controls help video
help and the screen magnifier renew is a maintenance event
estimation simulation program developed in support of the
space station freedom program ssfp this simulation uses
reliability and maintainability r m and logistics data to
estimate both average and time dependent maintenance demands
the simulation uses monte carlo techniques to generate
failure and repair times as a function of the r m and
logistics parameters the estimates are generated for a single
type of orbital replacement unit oru the simulation has been
in use by the ssfp work package 4 prime contractor rocketdyne
since january 1991 the renew simulation gives closer
estimates of performance since it uses a time dependent
approach and depicts more factors affecting oru failure and
repair than steady state average calculations renew gives
both average and time dependent demand values graphs of
failures over the mission period and yearly failure
occurrences are generated the averages demand rate for the
oru over the mission period is also calculated while renew
displays the results in graphs the results are also available
in a data file for further use by spreadsheets or other
programs the process of using renew starts with keyboard
entry of the r m and operational data once entered the data
may be saved in a data file for later retrieval the
parameters may be viewed and changed after entry using renew
the simulation program runs the number of monte carlo
simulations requested by the operator plots and tables of the
results can be viewed on the screen or sent to a printer the
results of the simulation are saved along with the input data
help screens are provided with each menu and data entry
