people actors and politicians and such death forest trump baglady bombay chevrolet sam mchooter legba and the new young gods coyote learns to cope with supermarkets and amusement parks as he tries to establish his godhood in the mass confusion of the entertainment world he is killed by accident and intent by the military frightened animals and natural dangers although his ally fox has the power to resurrect him to continue his responsibility to protect humans from monsters and vice versa coyote s proficiency with masks allows him to pretend to be actors generals women and other animals for the purposes of getting food sex money and power it does not always work out the way he intends review by susan cardinal sleepwell this is a novel of terror and laughter of bondage and explosion a searing masterpiece of tortured pieces sewn in the skein of a sow s purse as the authors pursue fame with shocking intensity coyote is changed from a complex morally ambiguous gure into a cardboard commentator for the animal news channel the text pulsates with nervous energy and undigested gas it is a searing satire cooked on the ames of passionate purple prose disposed of in a desert setting of unparalleled natural pulchritude most of all it is an absurdist classic reveling in the stupidity of humans in dealing with the nobility of animals the meaninglessness of war and consumption and the importance of breathing and excreting we follow coyote on his journey in search of free sex and food the trip is not con ned within the conventions of a linear or coherent narrative coyote bounces all over recollections and information inner feeling and outer action this not only challenges our expectations of literary form but it irritates the shit out of us coyote s credo of greed and aggrandizement is fueled by testosterone but fooled by estrogen that is coyote s lament he is too late to de over the intact virgin of bankrupt global capitalism and too early to grope the youth of utopia the narrative style re ects the confusion of his remembering over many lifetimes then of delving into the plasma regions of repressed feelings and animal lust the long sentences act like interminable bridges between unpleasant ideas and poorly formed thoughts of half hearted insights into the human and nonhuman conditions which get soaked by plasma this is a novel where gods walk among people sleep with them ruin them nancially then go on and laugh and play the settings in the deserts of north america and new york re ect the shadowy haunts of the gods trapped in their own deserts of unbelief and minimal clean water the old gods may be forgotten by name but they still struggle to snuggle and be warm under the blanket of belief that has been tattered by the oil soaked machinery of modern materialism new gods with the same bad habits start to form out of a developing post industrial unconsciousness following the discovery in europe in the late 1850s that humanity had roots predating known history and reaching deep into the pleistocene era scientists wondered whether north american prehistory might be just as ancient and why not the geological strata seemed exactly analogous between america and europe which would lead one to believe that north american humanity ought to be as old as the european variety this idea set off an eager race for evidence of the people who might have occupied north america during the ice age a long and as it turned out bitter and controversial search in the great paleolithic war david j meltzer tells the story of a scientific quest that set off one of the longest running feuds in the history of american anthropology one so vicious at times that anthropologists were deliberately frightened away from investigating potential sites through his book we come to understand how and why this controversy developed and stubbornly persisted for as long as it did and how in the process it revolutionized american archaeology in this book recent advances in the field of game theory specifically in the area of coordination games theory and policy are used to reexamine one of the most far reaching yet overlooked pieces of keeping with the original objectives of the roosevelt administration revised edition of sotère torregian s seminal book of poetry the age of gold 1976 retitled the age of gold redux supplemented by a new section of other poems from that period that either were excluded due to the book s size limitations or now have been added this edition includes for the first time three short yet relevant essays written by sotère during this period including one that was intended to serve as the original preface to the book will alexander has written the introduction for this revised edition we will try to look for answers to the question what is the foundation and root of violence and vengeance in the context of the western culture we will also try to tackle the issue of reconciliation perhaps come up with a sort of resolution on how the problem of violence and vengeance could be overcome individually and socially and to give a more ample definition of active nonviolence and its role in today s world the evolution of paleolithic technologies provides a novel perspective on long term trajectories of evolutionary change in paleolithic tools and tool makers members of the human lineage have been producing stone tools for more than 3 million years these artefacts provide key evidence for important evolutionary developments in hominin behaviour and cognition avoiding conventional approaches based on progressive stages of development this book instead examines global trends in six separate dimensions of technological behaviour between 2 6 million and 10 000 years ago combining these independent trends results in both a broader and a more finely punctuated perspective on key intervals of change in hominin behaviour to draw this picture together the concluding section explores behavioural cognitive and demographic implications of developments in material culture and technological procedures at seven key intervals during the pleistocene researchers interested in paleolithic archaeology will find this book invaluable it will also be of interest to archaeologists researching stone tool technology and to students of human evolution and behavioural change in prehistory this second volume explores jung s understanding of synchronicity and argues that it offers an important contribution to contemporary science whilst the scientific world has often ignored jung s theories as being too much like mysticism haule argues that what the human psyche knows beyond sensory perception is extremely valuable divided into two parts areas of discussion include shamanism and mastery border zones of exact science meditation parapsychology and psychokinesis jung in the 21st century volume two synchronicity and science will like the first volume be an invaluable resource for all those in the field of analytical psychology including students of jung psychoanalysts and psychotherapists with an interest in the meeting of jung and science the objective of this volume is to showcase the contemporary state of research on recognizing and evaluating the performance of stone age weapons from a variety of viewpoints including investigating their cognitive and evolutionary significance new archaeological finds and experimental studies have helped to bring this subject back to the forefront of human origins research in the last few years investigations have expanded beyond examining the tools themselves to include studies of damage caused by projectile weapons on animal and hominin bones and skeletal asymmetries in ancient hominin populations only recently has there been a growing interest in controlled and replicative experiments through this book readers will be updated in the state of knowledge through a multidisciplinary scientific reconstruction of prehistoric weapon use and its implications contributions from expert authors are organized into three themed parts recognizing weapon use experimental and archaeological studies of impact traces performance of weapon systems factors influencing penetration depth etc and behavioral and evolutionary ramifications cognitive and ecological effects of using different weapons michael p richards and jean jacques hublin the study of hominin diets and especially how they have primates modern humans 2 faunal and plant studies 3 evolved throughout time has long been a core research captured in cave and rock art sculpture paintings and more the engaging argument draws on current thinking in archaeology on how we can interpret the behaviour of people in the past through their use of material culture and how this affects our understanding of how we create and see art in the present exploring themes of gender identity and story telling in visual material culture this book forces a radical reassessment of how the ability to see makes us and our ancestors human as such it will interest lovers of both art and archaeology illustrated with examples from around the world from the earliest art from hundreds of thousands of years ago to the contemporary art scene including street art and advertising janik cogently argues that the human capacity for art which we share with our most ancient ancestors and cousins is rooted in our common neurophysiology the ways in which our brains allow us to see is a common heritage that shapes the creative process what changes according to time and place are the cultural contexts in which art is produced and consumed the book argues for an innovative understanding of art through the interplay between the way the human brain works and the culturally specific creation and interpretation of meaning making an important contribution to the debate on art archaeology this educational and highly useful book shows the hacker geek and maker communities how to bring science into their health and exercise routine to build a healthy lifestyle this volume brings together evidence for the cognitive social and technological foundations necessary for the development of hafting or the addition of handles and shafts to previously hand held tools which made the tools not only more efficient but improved their makers chances of survival in the fast changing modern world where does japan fit in and how should it relate to the united states and china three foreign commentators make a provocative and persuasive argument that the time has come for japan to help build a stronger asian community and to become an engage and conscientious global citizen modern human origins and the fate of the neanderthals are arguably the most compelling and contentious arenas in paleoanthropology the much discussed split between advocates of a single early emergence of anatomically modern humans in sub sahanan africa and supporters of various regional continuity positions is only part of the picture equally if not more important are questions surrounding the origins of modern behavior and the relationships between anatomical and behavioral changes that occurred during the past 200 000 years although modern humans as a species may be defined in terms of their skeletal anatomy it is their behavior and the social and cognitive structures that support that behavior which most clearly distinguish homo sapiens from earlier forms of humans this book assembles researchers working in eurasia and africa to discuss the archaeological record of the middle paleolithic and the middle stone age this is a time period when homo sapiens last shared the world with other species and during which patterns of behavior characteristic of modern humans developed and coalesced contributions to this volume query and challenge some current notions about the tempo and mode of cultural evolution and about the processes that underlie the emergence of modern behavior the papers focus on several fundamental questions do typical elements of modern human behavior appear suddenly or are there earlier archaeological precursors of them are the archaeological records of the middle paleolithic and middle stone age unchanging and monotonous or are there detectable evolutionary trends within these periods coming to diverse conclusions the papers in this volume open up new avenues to thinking about this crucial interval in human evolutionary history ancestry determination in the identification of unknown remains can be a challenge for forensic scientists and anthropologists especially when the remains available for testing are limited there are various techniques for the assessment of ancestry ranging from traditional to new microbiological and computer assisted methods biological affinity in forensic identification of human skeletal remains beyond black and white presents a range of tools that can be used to identify the probable socio cultural race category of unknown human remains gathering insight from those who have made recent improvements and scientific advances in the field the book begins with the historical foundations of the concept of biological affinity and the need for increased research into methods for determining ancestry of skeletal remains the contributors cover a range of topics including ancestry estimation from the skull using morphoscopic and morphometric traits and variables innovative methods from metric analyses of the postcrania and new approaches to dental non metric variation the biological diversity of hispanic populations and use of discriminant function analysis and 3d id software to determine ancestry methods of age progression and facial reconstructions to create two dimensional 2d and three dimensional 3d facial composites for missing people the preparation of skeletal remains for dna extraction and sampling and mtdna methods that are available for identification of haplogroups e g ancestral populations no single method or technique is adequate in the assessment of ancestry for accurate determinations the use of traditional and new techniques combined yields better results this book demonstrates the large repertoire of tools available to those tasked with these challenging determinations publisher marketing starch madness eating guidelines that really work by eating enough protein and choosing foods that keep our blood sugar even we can eliminate the urge to overeat also by limiting the amount of sugar and certain carbohydrates in our diet we can significantly reduce heart disease high blood pressure and many other serious illnesses water is another element our modern bodies lack over the counter drugs are prescribed for many conditions that can be alleviated by drinking more water toxicology in antiquity provides an authoritative and fascinating exploration into the use of toxins and poisons in antiquity it brings together the two previously published shorter volumes on the topic as well as adding considerable new information part of the history of toxicology and environmental health series it covers key accomplishments scientists and events in the broad field of toxicology including environmental health and chemical safety this first volume sets the tone for the series and starts at the very beginning historically speaking with a look at toxicology in ancient times the book explains that before scientific research methods were developed toxicology thrived as a very practical discipline people living in ancient civilizations readily learned to distinguish safe substances from hazardous ones how to avoid these hazardous substances and how to use them to inflict harm on enemies it also describes scholars who compiled compendia of toxic agents new chapters in this edition focus chiefly on evidence for the use of toxic agents derived from religious texts provides the historical background for understanding modern toxicology illustrates the ways previous civilizations learned to distinguish safe from hazardous substances how to avoid the hazardous substances and how to use them against enemies explores the way famous historical figures used toxins new chapters focus on evidence of the use of toxins derived from religious texts a critical assessment of how evidence in biological anthropology is discovered collected and interpreted a guide to transforming one's shape looks and life without the use of drugs surgery or depriving oneself cognitive archaeology is a relatively new interdisciplinary science that uses cognitive and psychological models to explain archeological artifacts like stone tools figurines and art squeezing minds from stones is a collection of essays from early pioneers in the field like archaeologists thomas wynn and iain davidson and evolutionary primatologist william mcgrew to up and coming newcomers like shelby putt ceri shipton mark moore james cole natalie uomini and lana ruck their essays address a wide variety of cognitive archaeology topics including the value of experimental archaeology primate archaeology the intent of ancient tool makers and how they may have lived and thought this book examines human conflict throughout history the reasons behind the struggles and why it persists the volume delves into the causes of human conflict and what can be done about them based on detailed descriptions that support insightful interpretations the book explores significant historical events in the course of human history by pursuing a web of violence approach it raises and answers questions about the sources of conflict and how it may or may not be resolved through investigations into human agency and practice it evaluates lessons learned concerning human conflict violence and warfare to illustrate these lessons the book presents a broad geographical and temporal set of data including research on the time of neanderthals in europe 20 30 thousand years ago the late neolithic civilization on the mediterranean 6 8 thousand years ago medieval ireland contemporary history of the western dani peoples of west papua and finally recent issues in brazil congo and kenya complete guide to genetics evolution and variation in human tooth crown and root morphology in modern and fossil homo sapiens connectivity as well as conflict characterizes eurasia this edited volume explores dynamic geopolitical and geo economic links reconfiguring spaces from the eastern edge of europe through the western edge of asia seeking explanation beyond description the ancient silk road tied together space much as pipelines railroads telecommunications infrastructure and similar cultural and constructed links ease the mobility of people and products in modern eurasia this book considers eurasia along an interlinked corridor with chapters illustrating the connections as a discussion foundation focusing on the shared interactions of a set of nation states through time and across space generating more positive considerations of the resurgently important region of eurasia china's interests fall into three chapters the southeastern border with vietnam the southwestern himalayan edge and the western muslim regions russia's recovery relates events to a larger landmass context and focuses on the importance of historic mobility a geo history of the caspian considers this petroleum rich area as a zone of cultural and economic interconnection the final focus on central asia treats the traditional heart of eurasia the concluding chapter pulls together strands linking subregions for a new concept of eurasia as an area linked by vital interests and overlapping histories the biblical apocalypse of john offers a lens for considering the apocalyptic challenges of our time focuses information from across time and culture on the relationships among status competition consumption and planetary sustainability rather than focusing on german philosophy or the french avant gardes as many books on the history of aesthetics do teukolsky takes up british responses to modern art controversies thus providing

a unique view on the development of artistic forms and art history she considers the canonical writing of authors like john ruskin walter pater and oscar wilde alongside texts belonging to the rich field of victorian print culture gallery reviews scientific treatises satirical cartoons advertisements and early photography monographs among them spanning the years 1840 to 1910 her argument also adds substance to our understanding of the transition from victorianism to modernism a period of especially lively exchange between artists and intellectuals here narrated with careful attention given to the historical particularities and real events that stamped their imprint on such interactions richard schechner is a pioneer of performance studies a scholar theatre director editor and playwright western society by investigating the re emergence of female trickster energy in all aspects of popular culture ricki tannen explores the psychological aspects of what happened when women s imagination was legally and psychologically enclosed millennia ago and demonstrates how the re emergence of trickster energy through the female imagination has the radical potential to effect a transformation of western consciousness examples are drawn from a diverse range of sources from jane austen and female sleuth narratives to madonna and sex and the city illustrating how trickster energy is used not to maintain power and control but to integrate and unite the paradoxical through humour subjects covered include imagination and metaphor the traditional trickster law and the imagination humour eros using logos the postmodern female trickster this highly original perspective on women s role in contemporary culture will offer readers a new vision of how humour psychologically operates as a healthy adaptation to trauma and adversity it will be of great interest to all analytical psychologists and psychoanalysts as well as those in women s cultural legal and literary studies ethnographic archaeology has emerged as a form of inquiry into archaeological dilemmas that arise as scholars question older more positivistic paradigms ethnographic archaeologies describes diverse methods objectives and rationalities currently employed in the making of engaged and collaborative archaeological research the contributors to this volume for example understand ethnographic archaeology variously as a means of critical engagement with heritage stakeholders as the basis of public policy debates as a critical archaeological study of ethnic groups as the study of what archaeology actually does as opposed to what researchers often think they are doing in excavations and surveys and as a foundation for transnational collaborations among archaeologists what keeps the term ethnographic archaeology coherent and relevant is the consensus among practitioners that they are embarking on a new archaeological path by attempting to engage the present directly and fundamentally basketry technology first published in 1977 is the only comprehensive guide for archaeologists anthropologists art historians and collectors for identifying and analyzing ancient baskets and basket fragments long out of print this volume is again available with an extensive new introduction by the original author that summarizes the extensive work done in this area over the past 35 years the volume describes proper field and lab techniques for recovery of specimens and offers a systematic methodology for identifying and interpreting twined coiled and plaited basket samples it then uses canyon de chelly as an example of how to process a large basketry assemblage properly in addition to 200 illustrations the book includes a variety of sample forms to use in describing and analyzing ancient baskets symposia of the society for the study of human biology volume v dental anthropology is a collection of papers that covers the application of dental pathology in the context of anthropology the book presents 15 studies that cover various human dental variables and relates to different anthropological factors the dental variables considered in the articles include tooth morphology occlusion and malocclusion of primate teeth morphogenesis of deciduous molar pattern in man and double rooted human lower canine teeth the text also covers topics about race specific dental traits such as radiographic study of the neanderthal teeth from krapina crown characters of the deciduous dentition of the japanese american hybrids and analysis of the american indian dentition the selection will be of great interest to evolutionary scientists such as anthropologists and paleontologists this handbook showcases an africa wide compendium of stone age archaeological sites and

Japan's Open Future 2009-03-01 modern human origins and the fate of the neanderthals are arguably the most compelling and contentious arenas in paleoanthropology the much discussed split between advocates of a single early emergence of anatomically modern humans in sub saharan africa and supporters of various regional continuity positions is only part of the picture equally if not more important are questions surrounding the origins of modern behavior and the relationships between anatomical and behavioral changes that occurred during the past 200 000 years although modern humans as a species may be defined in terms of their skeletal anatomy it is their behavior and the social and cognitive structures that support that behavior which most clearly distinguish homo sapiens from earlier forms of humans this book assembles researchers working in eurasia and africa to discuss the archaeological record of the middle paleolithic and the middle stone age this is a time period when homo sapiens last shared the world with other species and during which patterns of behavior characteristic of modern humans developed and coalesced contributions to this volume query and challenge some current notions about the tempo and mode of cultural evolution and about the processes that underlie the emergence of modern behavior the papers focus on several fundamental questions do typical elements of modern human behavior appear suddenly or are there earlier archaeological precursors of them are the archaeological records of the middle paleolithic and middle stone age unchanging and monotonous or are there detectable evolutionary trends within these periods coming to diverse conclusions the papers in this volume open up new avenues to thinking about this crucial interval in human evolutionary history

Transitions Before the Transition 2007-01-06 ancestry determination in the identification of unknown remains can be a challenge for forensic scientists and anthropologists especially when the remains available for testing are limited there are various techniques for the assessment of ancestry ranging from traditional to new microbiological and computer assisted methods biological affinity in forensic identification of human skeletal remains beyond black and white presents a range of tools that can be used to identify the probable socio cultural race category of unknown human remains gathering insight from those who have made recent improvements and scientific advances in the field the book begins with the historical foundations of the concept of biological affinity and the need for increased research into methods for determining ancestry of skeletal remains the contributors cover a range of topics including ancestry estimation from the skull using morphoscopic and morphometric traits and variables innovative methods from metric analyses of the postcrania and new approaches to

dental non metric variation the biological diversity of hispanic populations and use of discriminant function analysis and 3d id software to determine ancestry methods of age progression and facial reconstructions to create two dimensional 2d and three dimensional 3d facial composites for missing people the preparation of skeletal remains for dna extraction and sampling and mtDNA methods that are available for identification of haplogroups e g ancestral populations no single method or technique is adequate in the assessment of ancestry for accurate determinations the use of traditional and new techniques combined yields better results this book demonstrates the large repertoire of tools available to those tasked with these challenging determinations

The Female Trickster 2008-02-08 this handbook showcases an africa wide compendium of stone age archaeological sites and methodological advances that have improved our understanding of hominin lifeways and biogeography in the continent the focal time spans the pleistocene epoch c 2 5 million 11 700 years ago during which important human traits such as obligate bipedalism that freed the hands to engage in creative activities a large brain relative to body size language and social complexity developed in the general forms that they are found today the handbook is the first of its kind and it is expected to play a significant role in human evolutionary research by collating the african stone age record which exists in a fragmented state along the lines of national boundaries and colonial experiences showcasing emerging conceptual and methodological advances in african pleistocene archaeology providing reference datasets for teaching and researching african prehistory making africa s stone age record accessible to researchers and students based in africa who may not have access to journal publications where most new field discoveries are published the handbook features 128 chapters of which 116 are site entries grouped by the host countries and presented in an alphabetical order a number of those site related entries examine multiple archaeological localities lumped under specific projects or study areas the rest of the contributions deal with methodological topics such as luminescence and radiocarbon dating field data recovery lithic analysis micromorphology and hominin fossil and zooarchaeological records of pleistocene africa the introductory chapter provides an historical overview of the development of stone age paleolithic archaeology in africa beginning in the mid 19th century and paleoenvironmental and chronological frameworks commonly used to structure the continent s pleistocene record by making a good amount of african stone age literature accessible to researchers and the public we wish to promote interest in human evolutionary research in the continent and elsewhere

Ethnographic Archaeologies 2016-09-16 artifacts linked to projectile technologies traditionally have provided the foundations for time space systematics and cultural historic frameworks in archaeological research having to do with foragers with the shift in archaeological research objectives to processual interpretations projectile technologies continue to receive marked attention but with an emphasis on the implications of variability in such areas as design function and material as they relate to the broader questions of human adaptation the reason that this particular domain of foraging technology persists as an important focus of research i think comes in three parts a projectile technology was a crucial part of most foragers strategies for survival it was functionally specific and it generally was fabricated from durable materials likely to be detected archaeologically being fundamental to meat acquisition and the principal source of

calo ries projectile technologies were typically afforded greater time investment formal modification and elaboration of attributes than others moreover such technologies tend to display greater standardization because of con straints on size morphology and weight that are inherent to the delivery system the elaboration of attributes and standardization of form gives pro jectile technologies time and space sensitivity that is greater than most other foraging technologies and such sensitivity is immensely valuable in archae ological research
