this new volume sheds new light on current monetary issues in particular the debate on monetary policy making by blending theoretical economic analysis history of economics and historical case studies a discretionary monetary policy refers to cases in which the central bank is free to change its policy actions or key instruments when the need arises whilst a monetary policy rule can be defined as a commitment from independent central banks to reach one or several objective s by way of systematic policy actions this book uses case studies from france and sweden and places them in the context of keynes argument from his 1923 tract on monetary reforms to support the argument that the use of discretionary practices within a monetary policy rule such as in the gold standard era is the best approach this book takes an innovative approach in combining a theoretical analysis mainly the work of new neoclassical synthesis throughout woodford s model a history of economic thought analysis based on the monetary works from wicksell cassel and keynes and an historical study of central bank practices both in france based on bank of france archives materials and in sweden the final section of the book explores the debate on monetary policy rule in light of the 2008 financial crisis as such the book provides a unique synthesis that will be of interest not only to scholars of history of economic thought and economic theory but also to anyone with an interest in monetary economics and contemporary monetary policy

The Emotional Antecedents and Consequences of Social Rejection

2023-10-24

humans are social animals our need to belong is a cross cultural human universal when our desire for social connection is frustrated we can suffer from a host of harmful psychological and physiological consequences as a result social rejection can be an extremely aversive experience that can be strategically employed to inflict harm punishment e g relational aggression social rejection has both emotional antecedents and consequences that is social rejection can be elicited by emotions e g anger disgust etc within the rejecter and can evoke emotional reactions within the rejected e g anger sadness etc thus the role that emotion plays in social rejection is not simple it is multifaceted negative emotions such as anger and disgust can provoke social rejection and reciprocally they can evoke negative emotions in those who are socially rejected positive emotions however may act as a buffer or shield that insulates us from the deleterious consequences of rejection

notwithstanding financial crises global foreign exchange markets have undergone a

tremendous growth during the last two decades foreign exchange fx is often thought of as a site where economic actors exchange currencies for buying foreign goods or selling goods in foreign countries but the fx markets are better understood as financial spheres dominated by speculative actors a key question is how this huge global speculative sphere has developed and what maintains it thus far global currency markets have been largely neglected by the new approaches to finance and until now no study has existed to chart the interplay of their structural evolution and their shape as knowledge spheres this new book offers a systematic study of fx markets from a knowledge sociological perspective empirically focussing on analysts within these markets it makes the argument that market structures are reflected in and become stabilised by distinct cultures of financial expertise these cultures connect the actions and perceptions of loosely coupled globally distributed market players and establish shared sets of strategies of how to observe value and invest this highly original book will be of interest to scholars of economics sociology and political science and in particular to all those with an interest in the sociology of finance and the role of finance in the contemporary world

this book provides a new methodological approach to money and macroeconomics realizing that the abstract equilibrium models lacked descriptions of fundamental issues of a modern monetary economy the focus of this book lies on the stylized balance sheets of the main actors money after all is born on the balance sheets of the central bank or commercial bank while households and firms hold accounts at banks with deposits banks hold an account at the central bank where deposits are called reserves the book aims to explain how the two monetary circuits central bank deposits and bank deposits are intertwined it is also shown how government spending injects money into the economy modern monetary theory and european macroeconomics covers both the general case and then the eurozone specifically a very simple macroeconomic model follows which explains the major accounting identities of macroeconomics using this new methodology the eurozone crisis is examined from a fresh perspective it turns out that not government debt but the stagnation of private sector debt was the major economic problem and that cuts in government spending worsened the economic situation the concluding chapters discuss what a solution to the current problems of the eurozone must look like with scenarios that examine a future with and without a euro

this book provides a detailed balance sheet view of monetary and fiscal operations with a focus on the eurozone economy students policy makers and financial market actors will learn to assess the institutional processes that underpin a modern monetary economy in times of boom and in times of bust

this book first published in 1991 offers an integrative approach to the study of formal models in the social and behavioural sciences the theory presented here unifies both the representation of the social environment and the equilibrium concept the theory requires that all alternatives that are available to the players be specified in an explicit and detailed manner and this specification is defined as a social situation a situation therefore not only consists of the alternatives currently available to the players but also includes the set of opportunities that might be induced by the players from their current environment the theory requires that all recommended alternatives be both internally and externally stable the recommendation cannot be self defeating and at the same time should account for alternatives that were not recommended in addition to unifying the representation and the solution concept the theory also extends the social environments accommodated by current game theory
