Evidence-Based Clinical Practice in Nursing and Health Care 2009-09-24

evidence based clinical practice in nursing and healthcare examines the Joanna Briggs Institute model for evidence based practice which recognises research theory and practice as sources of evidence and takes a practical approach to developing implementing and evaluating practice based on evidence in its broadest sense. Evidence based clinical practice in nursing and healthcare addresses the nature of evidence in clinical practice generating and synthesising evidence and transferring and utilising evidence in clinical practice. It describes the development of practice information sheets and clinical guidelines and provides practical guidance on the implementation of evidence based practice and its evaluation using clinical audit.

Guidelines for Clinical Practice 1992-02-01

Guidelines for the clinical practice of medicine have been proposed as the solution to the whole range of current health care problems. This new book presents the first balanced and highly practical view of guidelines—their strengths, their limitations, and how they can be used most effectively to benefit health care. The volume offers recommendations and a proposed framework for strengthening development and use of guidelines. Numerous examples of guidelines, a ready-to-use instrument for assessing the soundness of guidelines, six case studies exploring issues involved when practitioners use guidelines on a daily basis with a real world outlook, the volume reviews efforts by agencies and organizations to disseminate guidelines and examines how well guidelines are functioning—exploring issues such as patient information, liability, costs, computerization, and the adaptation of national guidelines to local needs.

this research methods textbook distinguishes itself from other textbooks by providing a unique framework and perspective for users students to establish the relevancy of research in their clinical practice many if not most students in professional preparation allied health care programs view the research methods statistics course requirement of the curriculum as an obstacle to be overcome or at best as a necessary evil most research methods textbooks promote these notions because of the way they are presented of course most times they are written by researchers or statisticians and are absolutely correct in presenting the theoretical underpinnings and mechanistic applications of the scientific method they correctly present explanations as to why one type of methodology requires a certain type of statistical analysis based on the characteristics of the study population the type of data collected or the underlying assumptions pertinent to a specific statistical model so while technically beyond reproach their failure is in establishing how and why research activity and understanding is integral to a professional practice provided by publisher
