geosynthetics often play critical roles in civil engineering and it is important that the materials in use can withstand the physical and chemical pressures of the environment these range from resistance to leachates from landfill to resistance to root damage in soil liners as well as standard properties such as resistance to creep oxidation and uv light and tensile strength this rapra review report discusses the polymers used in each category of geosynthetics production methods test methods and applications the review is accompanied by around 400 abstracts from papers and books in the rapra polymer library database to facilitate further reading on this subject
