AS Level Mathematics Through Diagrams

2002

split into sections on pure mathematics statistics mechanics and discrete mathematics this one book is the essential study companion for all your as mathematics students ideal either as a class text or as a useful revision guide mathematical concepts and principles presented in a clear straightforward style each section includes a wealth of examination style questions and answers suitable for any specification the book features an as specification mapping grid so you can feel confident that your specification is covered

NASA Technical Translation

1966

collection of selected peer reviewed papers from the international conference on electrical information and mechatronics iceim 2012 december 23 25 2012 jiaozuo china the papers are grouped as follows chapter 1 mechanical engineering chapter 2 mechanical transmission vibration and friction chapter 3 materials engineering chapter 4 manufacturing technologies chapter 5 devices and instruments for detection and diagnosis chapter 6 mechatronics control and information technologies chapter 7 environment engineering chapter 8 engineering management and product design

Applied Research and Engineering Solutions in Industry

2013-02-27

this book discusses the theoretical foundations of spray and droplet applications relevant to the technology for active control of sprays applied to new products and applications improved product performance cost reductions and improved environmental outcomes it also covers theory related to power and propulsion materials processing and manufacturing technologies including droplet based net form processing coating and painting medication pesticides and insecticides and other consumer uses

Fluid Dynamics and Transport of Droplets and Sprays

2010-01-11

this three volume set lncs 13604 13606 constitutes revised selected papers presented at the second caai international conference on artificial intelligence held in beijing china in august 2022 cicai is a summit forum in the field of artificial intelligence and the 2022 forum was hosted by chinese association for artificial intelligence caai the 164 papers were thoroughly reviewed and selected from 521 submissions cicai aims to establish a global platform for international academic exchange promote advanced research in ai and its affiliated disciplines such as machine learning computer vision natural language processing and data mining amongst others

Artificial Intelligence

2023-01-01

the main objectives of the book are to introduce the design method of boundary control strategies for the axially moving structures to reduce their vibration this book provides the reader with a thorough grounding in the boundary controller design our goal is to provide advanced boundary controller design methods and their stability analysis methods and offer simulation examples and matlab programs for each boundary control algorithm for each chapter several engineering application examples are given and the contents of each chapter in this book are independent so that readers can just read their own needs in this book all the control algorithms and their programs are described separately and classified by the chapter name which can be run successfully in matlab the book can benefit researchers engineers and graduate students in the fields of pde modeling and boundary vibration control of flexible structures

The Engineer

1954

this open access book reports the results of a study conducted in switzerland in 2022 to provide an overview of the changing landscape of encryption and data protection technologies and their global usage trends the swiss confederation tasked the cyber defence campus cyd campus to identify the 38 most relevant encryption and data protection technologies analyze their expected evolution until 2025 and derive implications for the military civil society and economy sectors fifty experts from academia government and industry have contributed to this study and provided their viewpoints on the different technologies and trends this comprehensive collection of factsheets provides a reference for organizations and individuals that need to elaborate coherent and efficient data protection and encryption strategies in the coming years the 38 technologies have been sorted into five categories first encryption foundations represent the technologies used to create other encryption applications second low level applications represent the technologies that focus on micro functionalities third high level applications represent the technologies that focus on more abstract and macro functionalities fourth data protection represents the technologies used to protect data without encrypting these data finally use cases represent concrete ways the different technologies can be used together to create a working solution the book serves as a guide for decision making within administrations government organizations and industry it will also be interesting for the tech savvy board member or engineers looking to get an entry point into data protection topics last not least the book will also be a valuable reading for anyone interested in data protection and encryption

the icga series of conferences is specially aimed to serve the needs of the workers in this research area in the asia pacific region the previous conferences of this series have attracted a growing number of local regional and international participants 2005 was an auspicious year not only was it the international year of physics commemorating einstein s great achievements of 1905 it also was the anniversary of einstein s development of general relativity he submitted the final form of his field equations on 25 november 1915 nine decades years later around 40 taiwan based participants were joined by over 40 distinguished visitors from canada china france japan korea russia and the usa and this volume includes many of the papers that were presented the depth and breadth of these contributions reflect the high quality of the meeting and the development of the field in the asia pacific region

Pattern Recognition. ICPR International Workshops and Challenges

this collection of independent case studies demonstrates how wavelet techniques have been used to solve open problems and develop insight into the nature of the systems under study each case begins with a description of the problem and points to the specific properties of wavelets and techniques used for determining a solution the cases range from a very simple wavelet based technique for reducing noise in laboratory data to complex work on two dimensional geographical data display conducted at the earthquake research institute in japan one case study shows how wavelet analysis is used in the development of a japanese text to speech system for personal computers and another presents new wavelet techniques developed for and applied to the study of atmospheric wind turbulent fluid and seismic acceleration data although calculus and some junior and senior mathematics courses for scientists and engineers will suffice a solid background in undergraduate mathematics particularly analysis and numerical analysis and some familiarity with the basics of wavelets are helpful for reading this book

Metallurgia

1955

this book is the third volume of the proceedings of the 4th geoshanghai international conference that was held on may 27 30 2018 this volume entitled rock mechanics and rock engineering covers the recent advances and technologies in rock mechanics and rock engineering these papers are grouped in three categories 1 theoretical and numerical study of rock behaviours 2 experimental study of rock behaviours and 3 applications of rock mechanics and case studies this volume presents the state of the art theories methodologies and findings in the related areas the book may benefit researchers and scientists from the academic fields of rock mechanics and rock engineering geotechnical engineering geoenvironmental engineering transportation engineering geology mining and energy as well as practical engineers from the industry each of the papers included in this book received at least two positive peer reviews the editors would like to express their sincerest appreciation to all of the anonymous reviewers all over the world for their diligent work

Memoirs of the School of Engineering, Nagoya University

this volume contains 92 papers on the state of the art in robotics research in this volume topics on modelling and identification are treated first as they build the basis for practically all control aspects then the most basic control tasks are discussed i e problems of inverse kinematics groups of papers follow which deal with various advanced control aspects they range from rather general methods to more specialized topics such as force control and control of hydraulic robots the problem of path planning is addressed and strategies for robots with one arm for mobile robots and for multiple arm robots are presented also covered are computational improvements and software tools for simulation and control the integration of sensors and sensor signals in robot control
