this book takes an easy to understand look at the statistical approach called the person centered method instead of analyzing means variances and covariances of scale scores as in the common variable centered approach the person centered approach analyzes persons or objects grouped

according to their characteristic patterns or configurations in contingency tables the main focus of the book will be on configural frequency analysis cfa lienert and krauth 1975 which is a statistical method that looks for over and under frequented cells or patterns over frequented means that the observations in this cell or configuration are observed more often than expected under frequented means that this cell or configuration is observed less often than expected in cfa a pattern or configuration that contains more observed cases than expected is called a type similarly a pattern or configuration that is less observed than expected are called an antitype cfa is similar to log linear modeling in log linear modeling the goal is to come up with a fitting model including all important variables instead of fitting a model cfa looks at the significant residuals of a log linear model the book describes the use of an r package called confreq derived from configural frequency analysis the use of the software package is described and demonstrated with data examples

the book under review is an interesting elaboration that fills the gaps in libraries for concisely written and student friendly books about essentials in computer science i recommend this book for anyone who would like to study algorithms learn a lot about computer science or simply would like to deepen their knowledge the book is written in very simple english and can be understood even by those with limited knowledge of the english language it should be emphasized that despite the fact that the book consists of many examples mathematical formulas and theorems it is very hard to find

any mistakes errors or typos zbmathin computer science an algorithm is an unambiguous specification of how to solve a class of problems algorithms can perform calculation data processing and automated reasoning tasks as an effective method an algorithm can be expressed within a finite amount of space and time and in a well defined formal language for calculating a function starting from an initial state and initial input perhaps empty the instructions describe a computation that when executed proceeds through a finite number of well defined successive states eventually producing output and terminating at a final ending state the transition from one state to the next is not necessarily deterministic some algorithms known as randomized algorithms incorporate random input this book introduces a set of concepts in solving problems computationally such as growth of functions backtracking divide and conquer greedy algorithms dynamic programming elementary graph algorithms minimal spanning tree single source shortest paths all pairs shortest paths flow networks polynomial multiplication to ways of solving np complete problems supported with comprehensive and detailed problems and solutions making it an ideal resource to those studying computer science computer engineering and information technology

learn to find the happiness that is natural to you and enjoy better relationships better health more success and a longer life the peculiar thing about us humans is we spend a lot of time working to find people and things that will make us happy in fact we seem to spend the majority of our time doing this however there is no guarantee that any of this effort will work there are lots of people who have hordes of people around them and who have lots of things but have been unable to make themselves happy the truth is happiness can be had with little effort have you ever been happy for no reason at all of course you have without anything changing in life happiness just appears we see it in young children all the time in fact we expect to see it in children if you happen to ask a smiling child why he or she is so happy at best the answer may be because for an adult this may be an unsatisfying answer but for the child it is the truth happiness exists just because as we age we seem to lose touch with happiness for no reason at all we see a world where everyone is striving for stuff striving for popularity striving striving striving the natural fount of happiness we once enjoyed disappears as we join them however that happiness is not gone all that happened is we lost our connection to it this book is about recovering that connection we all grow up believing that if we work hard and if we are good people we will enjoy good relationships with others good health

success and a long life obviously this is not true there are a lot of rich old people who are not happy what we have what we do and the other circumstances of our lives do not provide authentic happiness instead happiness comes from inside of us and all by itself enables us to have secure relationships good health more success and longer lives so what is the secret of being happy being happy is a little like flipping a switch when it s on you are happy and when it s off you are not it s so easy how else can you explain being happy for no reason what you need to do is learn to turn it on and keep it turned on this book discusses seven practices that help you do that there is a lot of wisdom available about how to be happy most of it is thousands of years old but some is quite new the seven practices we will look at incorporate this wisdom to help you learn how to turn on happiness in your life this kind of happiness does not require changing anything in your life all you have to do is learn to turn it on
