A Grammar of Spoken English Discourse 2010-12-09

A Grammar of Spoken English Discourse 2010-10-07 david brazil s pioneering work on the grammar of spoken discourse ended at a grammar of speech 1995 due to his untimely death gerard o grady picks up the baton in this book and tests the description of used language against a spoken corpus he incorporates findings from the last decade of corpus linguistics study notably concerning phrases and lexical items larger than single orthographic words and ellipsis he demonstrates the added communicative significance that the incorporation of two systems of intonation key and termination bring to the grammar o grady reviews the literature and covers the theory before moving on to a practical analytic section his final chapter reviews the arguments maps the road ahead and lays out the practical applications of the grammar the book will be of great interest to researchers in applied linguistics discourse analysis and also efl esl

Mathematical and Statistical Estimation Approaches in Epidemiology 2009-06-06 mathematical and statistical estimation approaches in epidemiology compiles t oretical and practical contributions of experts in the analysis of infectious disease epidemics in a single volume recent collections have focused in the analyses and simulation of deterministic and stochastic models whose aim is to identify and rank epidemiological and social mechanisms responsible for disease transmission the contributions in this volume focus on the connections between models and disease data with emphasis on the application of mathematical and statistical approaches that quantify model and data uncertainty the book is aimed at public health experts applied mathematicians and sci tists in the life and social sciences particularly graduate or advanced undergraduate students who are interested not only in building and connecting models to data but also in applying and developing methods that quantify uncertainty in the context of infectious diseases chowell and brauer open this volume with an overview of the classical disease transmission models of kermack mckendrick including extensions that account for increased levels of epidemiological heterogeneity their theoretical tour is followed by the introduction of a simple methodology for the estimation of the basic reproduction number r the use of this methodology θ is illustrated using regional data for 1918 1919 and 1968 in uenza pandemics

The Coevolution Quarterly 1977

Shellfish Life Histories and Shellfishery Models 1995

2012-08 publishes original research in all branches of mechanics including aerodynamics aeroelasticity boundary layers computational mechanics constitutive modeling of materials dynamics elasticity flow and fracture heat transfer hydraulics impact internal flow mechanical properties of materials micromechanics plasticity stress analysis structures thermodynamics turbulence vibration and wave propagation

Connection Between Silviculture and Wood Quality Through Modelling Approaches and Simulation Softwares 1997 this symposium was dedicated to the discussion of advances in the applications of physics in both clinical practice and in research recognized specialists were invited to present topics related to their current professional and research interest in addition a poster session and short seminars were held mainly for works in progress the rapid growth of medical physics in mexico brought the idea of organizing a symposium whose purpose was to encourage interest in both research and hospital practice as well as to provide a forum for interchange of information and ideas all papers were peer reviewed topics include detectors for imaging applications dosimetry magnetic resonance imaging mammography nuclear medicine phase contrast radiography and radiotherapy
