this book offers a description of current and recently developed laboratory assays in the field of haemostasis and thrombosis it is the result of a unique cooperation between experts from more than 60 institutes in 12 european countries brought together by the european concerted action on thrombosis and disabilities under the auspices of the commission of the european communities in brussels belgium the ecact which was initiated in 1981 designed and performed three prospective clinical studies to establish haemostatic factors as risk indicators of thrombosis included were patients with angina pectoris at risk from myocardial infarction patients undergoing angioplasty at risk from re stenosis and patients receiving hip replacement at risk from deep venous thrombosis assay procedures were chosen training courses for technicians held and essential reagents were supplied from a central source a quality control assessment scheme served to compare assay results both within and between laboratories in the angina pectoris study centres determined most of the assays locally in the other two studies assays were performed centrally the need for further quality assessment in europe dr j f davidson in glasgow led to a separate activity coordinated by including coagulation inhibitors and plasminogen as risk factors for familial venous thrombosis the editors hope the european concerted action assay procedures book will contribute to further harmonization of haemostasis assays and ultimately to their standardization

fundamental techniques of mathematical modeling of processes essential to the food industry are explained in this text instead of concentrating on detailed theoretical analysis and mathematical derivations important mathematical prerequisites are presented in summary tables readers attention is

focused on understanding modeling techniques rather than the finer mathematical points topics covered include modeling of transport phenomena kinetic processes and food engineering operations statistical process analysis and quality control as applied to the food industry are also discussed the book's main feature is the large number of worked examples presented throughout included are examples from almost every conceivable food process most of which are based on real data given in the many references each example is followed by a clear step by step worked solution
