longleaf pine although widely distributed in the presettlement forests of the southern coastal plain now occupies less than 10 percent of its original range it is a highly desirable species because it resists tire insects and disease and produces excellent quality solid wood products regeneration of the species either by natural methods or by planting of bare root nursery stock has been difficult and renewed interest in it has resulted in evaluation of new approaches to seedling establishment using container stock has greatly improved the success of longleaf pine establishment practical guidelines are presented that will help nursery personnel consistently produce good container stock that will survive well and initiate early height growth
