current theories about human memory have been shaped by clinical observations and animal experiments this doctrine holds that the medial temporal lobe subserves one memory system for explicit or declarative memories while the basal

ganglia subserves a separate memory system for implicit or procedural memories including habits cortical areas outside the medial temporal lobe are said to function in perception motor control attention or other aspects of executive function but not in memory the evolution of memory systems advances dramatically different ideas on all counts it proposes that several memory systems arose during evolution and that they did so for the same general reason to transcend problems and exploit opportunities encountered by specific ancestors at particular times and places in the distant past instead of classifying cortical areas in terms of mutually exclusive perception executive or memory functions the authors show that all cortical areas contribute to memory and that they do so in their own ways using specialized neural representations the book also presents a proposal on the evolution of explicit memory according to this idea explicit declarative memory depends on interactions between a phylogenetically ancient navigation system and a representational system that evolved in humans to represent one's self and others as a result people embed representations of themselves into the events they experience and the facts they learn which leads to the perception of participating in events and knowing facts the evolution of memory systems is an important new work for students and researchers in neuroscience psychology and biology

this is a book for all faculty who are concerned with promoting the persistence of all students whom they teach most recognize that faculty play a major role in student retention and success because they typically have more direct contact with students than others on campus however little attention has been paid to role of the faculty in this specific mission or to the corresponding characteristics of teaching teacher student interactions and connection to student affairs activities that lead to students long term engagement to their academic success and ultimately to graduation at a time when the numbers of underrepresented students working adults minority first generation low income and international students is increasing this book a companion to her earlier teaching underprepared students addresses that lack of specific guidance by providing

faculty with additional evidence based instructional practices geared toward reaching all the students in their classrooms including those from groups that traditionally have been the least successful while maintaining high standards and expectations recognizing that there are no easy answers kathleen gabriel offers faculty ideas that can be incorporated in or modified to align with faculty s existing teaching methods she covers topics such as creating a positive and inclusive course climate fostering a community of learners increasing engagement and students interactions activating connections with culturally relevant material reinforcing self efficacy with growth mindset and mental toughness techniques improving lectures by building in meaningful educational activities designing reading and writing assignments for stimulating deep learning and critical thinking and making grade and assessment choices that can promote learning
