Breastfeeding

2017-09-29

breastfeeding is a biocultural phenomenon not only is it a biological process but it is also a culturally determined behavior as such it has important implications for understanding the past present and future condition of our species in general scholars have emphasized either the biological or the cultural aspects of breastfeeding but not both as biological anthropologists the editors of this volume feel that an evolutionary approach combining both aspects is essential one of the goals of their book is to incorporate data from diverse fields to present a more holistic view of breastfeeding through the inclusion of

research from a number of different disciplines including biological and social cultural anthropology nutrition and medicine the resulting book presenting the complexity of the issues surrounding very basic decisions about infant nutrition will fill a void in the existing literature on breastfeeding

Handbook of Forensic Medicine

2014-03-17

since the early 1990s unexplained infant death has been reformulated as a criminal justice problem within many western societies this shift has produced wrongful convictions in more than one jurisdiction this book uses a detailed case study of the murder trial and appeals of kathleen folbigg to examine the pragmatics of proof beyond a reasonable doubt it explores how legal process medical knowledge and expectations of motherhood work together when a mother is charged with killing infants who have died in mysterious circumstances the author argues that folbigg who remains in prison was wrongly convicted the book also employs folbigg s trial and appeals to consider what lessons courts have learned from prior wrongful convictions such as those of sally clark and angela cannings the author s research demonstrates that the folbigg court was misled about the state of medical knowledge regarding infant death and that the case proceeded on the incorrect assumption that behavioural and scientific evidence provided independent proofs of guilt individual chapters critically assess the relationships between medical research and expert testimony the operation of unexamined cultural assumptions about good mothering and the manner in which contested cases are reported by the press as overwhelming
