the international conference of harmonization ich has worked on harmonizing the stability regulations in the us europe and japan since the early 1990s even though the stability guidelines q1a r2 was issued over a decade ago issues surrounding this arena continue to surface as the principles described in the guideline are applied to different technical concentrations as a result the stability community has continued to discuss concerns and find ways of harmonizing regulatory requirements streamlining practices improving processes in order to bring safe and effective medical supplies to the patients around the world in 2007 the american association of pharmaceutical scientists aaps stability focus group organized two workshops the stability workshop and the degradation mechanism workshop these meetings attracted many industry scientists as well as representatives from several regulatory agencies in the world to discuss important topics related to pharmaceutical stability practices recognizing the importance of documenting these discussions and with the permission of aaps i have

worked with speakers to assemble a collection of 30 articles from presentations given at these two meetings mainly the stability workshop i trust that this book will be beneficial to all of you in providing guidance and up to date information for building quality stability programs v freedom of our mind is mother of all inventions

a theory is developed which predicts the interference velocities and interference velocity gradients caused by the walls of the tunnel large wake deflections are allowed in both the lateral and vertical directions the theory includes v stol and conventional wall interference theories and ground effect as special cases symmetry and interchange relationships between the interference factors are developed and extensive numerical results are

presented use of the interference factors to correct data depends upon the availability of detailed aerodynamic treatments in nonuniform flow of the model under test in most tests the available aerodynamic treatments will be found either inadequate or too time consuming for rigorous routine correction of data relating to lateral directional stability
