film cameras the bodies themselves have little to do with image quality lenses are far more important to image quality than camera bodies so as long as your camera has accurate shutter speeds aperture settings and metering the brand you pick doesn't really have much of an effect upon the final image so then it appears the model camera you choose is irrelevant well no the type of film slr camera you choose is most important to you as the photographer in features and convenience comfort has a lot to do with how good you are as a photographer what i mean by that is that you choose a camera that feels comfortable in your hands and becomes an extension of your brain as a photographer this makes it easier to capture the types of images you want

in hard rock terrain shallow water wells generally have a poor to moderate yield sinking wells deeply to tap yielding fracture zones often backfires because the borehole may miss the saturated fracture zones at depths a wrong approach to groundwater exploration in hard rock has therefore often led to unnecessary recurring expenditures and waste of time something that could have been avoided by a systematic and proper geophysical approach the combination of various geophysical techniques with environmental conditions is essential to constrain the interpretation and reduce uncertainties in this respect this book presents the approach to groundwater exploration in hard rocks various geophysical techniques and combinations to be used interpretation of data with case studies and drilling results and the preparation of different utility maps
