with 13 tables 16 charts 17 maps 8 diagrams 92 illustrations strategy is a many sided word connoting different things to different people the author of any work on strategy therefore owes it to his reader to define at the outset his own conception of this ambiguous term in the present volume the author has viewed strategy broadly including within it not only the art of military command the original meaning of the term but all those activities associated with the preparation for and the conduct of war in the pacific viewed thus the arena of pacific strategy is the council chamber rather than the coral atoll its weapons are not bombs and guns but the mountains of memoranda messages studies and plans that poured forth from the deliberative bodies entrusted with the conduct of the war its sound is not the clash of arms but the cool voice of reason or the heated words of debate thousands of miles from the scene of conflict it deals with policy and grand strategy on the highest level war aims the choice of allies and theaters of operations the distribution of forces and supplies and the organization created to use them on only a slightly lower level it deals with more strictly military matters with the choice of strategies with planning and the selection of objectives with the timing of operations the movement of forces and finally their employment in battle strategy in its larger sense is more than the handmaiden of war it is an inherent element of statecraft akin to policy and encompasses preparations for war as well as the war itself thus this volume treats the prewar period in some detail not in any sense as introductory to the main theme but as an integral and important part of the story of pacific strategy the great lessons of war it has been observed are to be found in the events preceding the outbreak of hostilities it is then that the great decisions are made and the nature of the war largely determined this is the first academic study of india s emerging maritime strategy and offers a systematic analysis of the interplay between western military thought and indian maritime traditions by a quirk of historical fate europe embarked on its age of discovery just as the main asian powers were renouncing the sea ushering in centuries of western dominance in the 21st century however asian states are once again resuming a naval focus with both china and india dedicating some of their new found wealth to building powerful navies and coast guards and drawing up maritime strategies to govern the use of these forces the united states like the british empire before it is attempting to manage these rising sea powers while preserving its maritime primacy this book probes how india looks at the sea what kind of strategy and seagoing forces new delhi may craft in the coming years and how indian leaders may use these forces it examines the material dimension but its major premise is that navies represent a physical expression of a society s history philosophical traditions and culture this book then ventures a comprehensive appraisal of indian maritime strategy this book will be of interest to students of sea power strategic studies indian politics and asian studies in general james r holmes is an associate professor of strategy at the u s naval war college and a former u s navy surface warfare officer toshi yoshihara is an linguistic repertoire available to the child as she attempts to make requests and vary these to suit different goals and addressees this book helps unravel features of pragmatic development in the child s interlanguage a subject about which we yet know very little the european union in the twenty first century major political economic and security policy trends unpacks some of the most prominent issues faced by the eu over the last two decades and considers how they may shape its future as well as the future of international politics johnston argues that the preemptive first use of nuclear weapons long the foundation of american nuclear strategy was not the carefully reasoned response to a growing soviet conventional threat instead it was part of a process of cultural socialization by which the united states reconstituted the previously nationalist strategic cultures of the european allies into a seamless western community directed by washington building a bridge between theory and practice this book examines the usefulness of cultural theory in international history this volume has arisen from a three part five year study on language contact among multilingual sign language users which has three strands cross signing sign switching and sign speaking these phenomena are only sparsely documented so far and thus the volume is highly innovative and presents data and analyses not previously available the present book is a result of a seven year 1986 1992 national research program in cognitive science in germany presumably the first large scale cognitive science program there anchored in psychology and therefore christened wissenspsychologie psychology of knowledge it has found interdisciplinary resonance especially in artificial intelligence and education the research program brought together cognitive scientists from over twenty german universities and more than thirty single projects were funded the program was initiated by heinz mandl and hans spada the main goals of which were to investigate the acquisition of knowledge the access to knowledge and the modification and application of knowledge from a psychological perspective emphasis was placed on formalisms of knowledge representation and on the processes involved in many of the projects this was combined with computer simulations a final but equally important goal was the development of experimental paradigms and methods for data analysis that are especially suited to investigate knowledge based processes the research program has had a major impact on cognitive psychology in germany research groups were established at many universities and research equipment was provided it also inspired a considerable number of young scientists to carry out cognitive research employ modeling techniques from artificial intelligence for psychological theorizing and construct intelligent tutoring systems for education close contacts with cognitive scientists in the u s have helped to firmly integrate the program with international research endeavours each year one or two workshops were held the present volume is the result of the final workshop which was held in september 1992 selected results from seventeen projects are presented in this book the volume is enriched by three guest scholars who agreed to participate in the final workshop and logistics the movement of forces to battlefields their supply and on going support is critical to military success although this principle is theoretically accepted the importance of being well prepared to rapidly transport troops and supplies to distant crisis points has not been complemented as menarchik shows by adequate lift capabilities the author uses the six month buildup to desert storm as proof that the united states needs to increase the priority of logistics in strategy and improve its strategic transport capabilities especially surge strategic lift current transport capabilities will not be positioned or structured to respond effectively to the contingencies associated with america s growing responsibilities given the realities of the new world order menarchik himself an experienced pilot policy planner and operational commander clearly demonstrates that powerlift directly affects choices timing strategy development and implementation and sweeping policy options he shows that although combat strategy and tactics receive high profile attention it is lift capability and capacity as a prerequisite that is fundamental to attaining objectives readers will learn where how and why america needs to improve its capabilities first report of session 2010 11 documents considered by the committee on 8 september 2010 including the following recommendations for
