NANDA-I-NIC-NOC  2016-07 visualizing with text uncovers the rich palette of text elements usable in visualizations from simple labels through to documents using a multidisciplinary research effort spanning across fields including visualization typography and

cartography it builds a solid foundation for the design space of text in visualization the book illustrates many new kinds of visualizations including microtext lines skim formatting and typographic sets that solve some of the shortcomings of well known visualization techniques key features more than 240 illustrations to aid inspiration of new visualizations eight new approaches to data visualization leveraging text quick reference guide for visualization with text builds a solid foundation extending current visualization theory bridges between visualization typography text analytics and natural language processing the author website including teaching exercises and interactive demos and code can be found here designers developers and academics can use this book as a reference and inspiration for new approaches to visualization in any application that uses text

Western Europe, North America and Australasia 2013-10-22 this book presents a unique and up to date summary of what is known about groundwater on our planet from a global perspective and in terms of area specific factual information unlike most textbooks on groundwater it does not deal with theoretical principles but rather with the overall picture that emerges as a result of countless observations studies and other activities related to groundwater in all parts of the world the focus is on showing the role and geographical diversity of groundwater a natural resource of great importance in daily life but poorly understood by the general public and even by many water sector professionals the book starts by analysing groundwater in the context of the hydrological cycle subsequently groundwater systems as physical units with their boundaries mainly defined by geological conditions are reviewed the next chapter looks at groundwater as a resource paying attention among others to its quantity and quality to the differentiation between renewable and non renewable resources and to the techniques for withdrawing groundwater this is followed by a systematic documentation of the quantities of groundwater withdrawn and used around the world and of the corresponding shares of groundwater in each of the main water use sectors after that steadily growing needs for groundwater management interventions are identified resulting from local human activities and global change including demography economic development and climate change finally groundwater resources management is addressed and

real life cases are described that illustrate actions taken and experiences with different issues in different parts of the world the authors attempted to write this book in such a way that it is accessible to a wider readership than just groundwater professionals it will also benefit non groundwater specialists who work in groundwater related fields water managers land use planners environmentalists agronomists engineers economists lawyers and journalists by broadening their understanding of groundwater and making them aware of the huge variety of groundwater settings groundwater specialists will use the book as a convenient reference on the geographical diversity of groundwater part of the contents or interpretations offered may even be new to them or enhance their knowledge of some aspects the many maps tables and references will save much time for those who would otherwise have to search elsewhere for basic information on the globe s groundwater

□□ 1985 reprint of the original first published in 1872 the publishing house anatiposi publishes historical books as reprints due to their age these books may have missing pages or inferior quality our aim is to preserve these books and make them available to the public so that they do not get lost
