The Truthful Art 2016-02-08 corruption and ineffectiveness are often expected of public servants in developing countries however some groups within these states are distinctly more effective and public oriented than the rest why patchwork leviathan explains how a few spectacularly effective state organizations manage to thrive amid general institutional weakness and succeed against impressive odds drawing on the hobbesian image of the state as leviathan erin metz mcdonnell argues that many seemingly weak states actually have a wide range of administrative capacities such states are in fact patchworks sewn loosely together from scarce resources into the semblance of unity mcdonnell demonstrates that when the human cognitive and material resources of bureaucracy are rare it is critically important how they are distributed too often scarce bureaucratic resources are scattered throughout the state yielding little effect mcdonnell reveals how a sufficient concentration of resources clustered within particular pockets of a state can be transformative enabling distinctively effective organizations to emerge from a sea of ineffectiveness patchwork leviathan offers a comprehensive analysis of successful statecraft in institutionally challenging environments drawing on cases from contemporary ghana and nigeria mid twentieth century kenya and brazil and china in the early twentieth century based on nearly two years of pioneering fieldwork in west africa this incisive book explains how these highly effective pockets differ from the western bureaucracies on which so much state and organizational theory is based providing a fresh answer to why well funded global capacity building reforms fail and how they can do better

Living and teaching in Mayotte 2015-01-30 for 2 000 years the standard philosophical model of knowledge was that it could be defined as a justified true belief according to this way of thinking we can know for example that we are human because 1 we believe ourselves to be human 2 that belief is justified others treat us as humans not as dogs and 3 the belief is true this definition which dates to plato was challenged by edmund gettier in one of the most influential works of philosophy published in the last century a three page paper that produced two clear examples of justified true beliefs that could not in

fact be considered knowledge gettier s achievement rests on solid foundations provided by his mastery of the critical thinking skill of analysis by understanding the way in which plato and every other epistemologist had built their arguments he was able to identify the relationships between the parts and the assumptions that underpinned then that precise understanding was what gettier required to mount a convincing challenge to the theory one that was bolstered by a reasoning skill that put his counter case pithily and in a form his colleagues found all but unchallengeable
