Fleet Telematics

2007-10-23

this book combines wireless telematics systems with dynamic vehicle routing algorithms and vehicle positioning systems to produce a telematics enabled information system that can be employed by commercial fleet operators for real time monitoring control and planning the book further presents a messaging and fleet monitoring system and a dynamic planning system dps that provides real time decision support considering the current state of the transportation system

as one of a series of studies aimed at gathering data to develop human factors design guidelines for advanced traveler information systems atis and commercial vehicle operations cvo the present study utilized a driving simulator to study cvo drivers and 1 the effects of driver fatigue and 2 the effects of mental workload on objective and subjective indices of driver performance and opinion fatigue was induced through sleep deprivation and through a 90 minute simulator drive mental workload was manipulated through driving task load and atis complexity although the results indicated degraded driving performance under the sleep deprived condition performance on atis related tasks was not affected by sleep deprivation the implication of this and other results are detailed technical report documentation page

Institutional Barriers and Opportunities for I.V.H.S. in Commercial Vehicle Operations

1992

reconstructing commercial vehicle accidents is a complex task that is often misunderstood or misinterpreted frequently mistakes are made in the determination of the vehicle s ability to brake efficiently the engine speeds and the loading condition this reference will identify the proper techniques you should use in order to correctly assess a commercial vehicle accident scene the authors of this text discuss in great detail the ways in which commercial vehicles are unique in their operation performance and regulations chapters are dedicated to the different operating systems of these vehicles such as the electrical systems tires steering suspension and much more you will also find out about the human factors in commercial vehicle operations and accidents

originally formed in lavender hill south london the commercial car company soon opened a brand new factory in luton bedfordshire where it produced its first truck in 1907 with the first commer bus appearing in 1909 producing over 3 000 vehicles for the military during the first world war commer went bust in the 1920s and was bought by humber becoming part of the rootes group in 1931 again producing many thousands of truck during world war two commer entered the post war era with a modern series of trucks and light commercials unusually the company made its own diesel engine the ts3 a two stroke design with a distinctive noise that earned it the nickname commer knocker in the 1960s production moved to dunstable and by the late 1970s rootes had been sold to chrysler which rebranded the truck division as dodge after the peugeot takeover the vans and commercials were developed in partnership with the renault truck division perhaps the most famous of the commer vehicles was the pa pb van which was used by the post office in its thousands as well as being converted into camper vans many still survive to this day despite production of dodges ceasing in the 1990s peter daniels tells the story of commer commercial vehicles in this new book

this practical new book presents the application of big data analytics to connected vehicles smart cities and transportation systems this book enables transportation professionals to understand how data analytics can and will expand the design and engineering of connected vehicles and smart cities readers find extensive case studies and examples that provide a strong framework focusing on practical application of data sciences and analytic tools for actual projects in the field both federal and private sector investments have a strong interest in the connected vehicle and this book discusses the impact this has on transportation this book defines urban analytics and modeling incentives and governance mobility networks energy networks and other attributes and elements that craft a smart city readers learn how smart cities impact the application of advanced technologies in urban areas this book explains how recently passed transportation legislation for the us has a specific emphasis on the use of data for performance management

Highway/heavy Vehicle Interaction

2003

the aim of this work consisting of 9 individual self contained booklets is to describe commercial vehicle technology in a way that is clear concise and illustrative compact and easy to understand it provides an overview of the technology that goes into modern commercial vehicles starting from the customer s

fundamental requirements the characteristics and systems that define the design of the vehicles are presented knowledgeably in a series of articles each of which can be read and studied on their own in this volume fuel consumption and consumption optimization the main focus is placed on the factors for optimizing consumption in the conventional vehicle fuel consumption can be optimized by four different factors the technology of the vehicle the conditions of its operation the behavior of the driver and the maintenance and upkeep of the vehicle these aspects are described in a way that is easily understood for training and practical application
