PHR and SPHR Professional in Human Resources Certification Complete Study Guide 2019-04-30 social capital theorists have shown that some people do better than others in part because they enjoy larger more supportive or otherwise more useful networks but why do some people have better networks than others unanticipated gains argues that the practice and structure of the churches colleges firms gyms childcare centers and schools in which people happen to participate routinely matter more than their deliberate networking exploring the experiences of new york city mothers whose children were enrolled in childcare centers this book examines why a great deal of these mothers after enrolling their children dramatically expanded both the size and usefulness of their personal networks whether how and how much the mother s networks were altered and how useful these networks were depended on the apparently trivial but remarkably consequential practices and regulations of the centers the structure of parent teacher organizations the frequency of fieldtrips and the rules regarding drop off and pick up times all affected the mothers networks relying on scores of in depth interviews with mothers quantitative data on both mothers and centers and detailed case studies of other routine organizations small shows that how much people gain from their connections depends substantially on institutional conditions they often do not control and through everyday processes they may not even be aware of emphasizing not the connections that people make but the context in which they are made unanticipated gains presents a major new perspective on social capital and on the mechanisms producing social inequality
