in the early days of the a need was recognized for a language to display 3d objects through a browser an html like language vrml was proposed in 1994 and became the standard for describing interactive 3d objects and worlds on the 3d courses were started several best selling books were published and vrml continues to be used today however vrml because it was based on html is a stodgy language that is not easy to incorporate with other applications and has been difficult to add features to meanwhile applications for interactive 3d graphics have been exploding in areas such as medicine science industry and entertainment there is a strong need for a set of modern based technologies applied within a standard extensible framework to enable a new generation of modeling simulation applications to emerge develop and interoperate x3d is the next generation open standard for 3d on the web it is the result of several years of development by the 3d consortium s x3d task group instead of a large monolithic specification like vrml which requires full adoption for compliance x3d is a component based architecture that can support applications ranging from a simple non interactive animation to the latest streaming or rendering applications x3d replaces vrml but also provides compatibility with existing vrml content and browsers don brutzman organized the first symposium on vrml and is playing a similar role with x3d he is a founding member of the consortium len daly is a professional member of the consortium and both len and don have been involved with the development of the standard from the start the first book on the new way to present interactive 3d content over the written by two of the designers of the standard plentiful illustrations and screen shots in the full color text companion website with extensive content including the x3d specification sample code and applications content creation tools and demos of compatible browsers
