although road accident deaths have halved between 1958 and 2007 whilst the number of licensed motor vehicles and vehicle mileage covered increased by 400 per cent the current rate of 3 000 deaths and 250 000 injuries is still an unacceptably high level road accidents are the largest single cause of death for people between the ages of 5 and 35 in britain and road accidents cost our economy some 18 billion each year the number of deaths and injuries on roads far outweighs the deaths and injuries in other transport modes and should be viewed as a major public health problem the government should establish a british road safety survey to track overall casualty and safety trends and review current methods for recording road traffic injuries the committee recommends a systems approach to road safety ensuring the vehicle the road infrastructure regulations and driver training are designed to similar safety and performance standards other recommendations include more 20 mph speed limits a more proactive approach to determining the safety benefits of new vehicle technologies action on young drivers who represent a disproportionate risk to road users and vulnerable users motorcyclists elderly and child pedestrians and cyclists horse riders a higher priority given to enforcement of drink drive and drug drive offences the committee recommends the establishment of an independent road safety commission with powers to work across the whole of government ensuring that a high priority and adequate resources are given to road safety and that all government departments and agencies give active support the government should also establish a road accident investigation branch like those in aviation rail and marine

over the past decade china has built 25 000 km of dedicated highspeed railway more than the rest of the world combined what can we learn from this remarkable experience china s high speed rail development examines the chinese experience to draw lessons for countries considering investing in high speed rail the report scrutinizes the planning and delivery mechanisms that enabled the rapid construction of the high speed rail system it highlights the role of long term planning consistent plan execution and a joint venture structure that ensures active participation of provincial and local governments in project planning and financing traffic on china s high speed trains has grown to 1 7 billion passengers a year the study examines the characteristics of the markets for which high speed rail is competitive in china it discusses the pricing and service design considerations that go into making high speed rail services competitive with other modes and factors such as good urban connectivity that make the service attractive to customers one of the most remarkable aspects of the chinese experience is the rapid pace of high quality construction the report looks at the role of strong capacity development within and cooperation among china railway corporation rail manufacturers universities research institutions laboratories and engineering centers that allowed for rapid technological advancement and localization of technology it describes the project delivery structures and incentives for delivering quality and timely results finally the report analyzes the financial and economic sustainability of the investment in high speed rail it finds that a developing country can price high speed rail services affordably and still achieve financial viability but this requires very high passenger density economic viability similarly depends on high passenger density

viewing transportation through the lens of current social economic and policy aspects this four volume reference work explores the topic of transportation across multiple disciplines within the social sciences and related areas including geography public policy business and economics the book s articles all written by experts in the field seek to answer such questions as what has been the legacy not just economically but politically and socially as well of president eisenhower s modern interstate highway system in america with that system and the infrastructure that supports it now in a state of decline and decay what s the best path for the future at a time of enormous fiscal constraints should california politicians plunge ahead with plans for a high speed rail that every expert says despite the allure

will go largely unused and will never pay back the massive investment while at this very moment potholes go unfilled all across the state what path is best for emerging countries to keep pace with dramatic economic growth for their part what are the social and financial costs of gridlock in our cities features approximately 675 signed articles authored by prominent scholars are arranged in a to z fashion and conclude with further readings and cross references a chronology helps readers put individual events into historical context a reader s guide organizes entries by broad topical or thematic areas a detailed index helps users quickly locate entries of most immediate interest and a resource guide provides a list of journals books and associations and their websites while articles were written to avoid jargon as much as possible a glossary provides quick definitions of technical terms to ensure full well rounded coverage of the field the general editor with expertise in urban planning public policy and the environment worked alongside a consulting editor with a background in civil engineering the index reader s guide and cross references combine for thorough search and browse capabilities in the electronic edition available in both print and electronic formats encyclopedia of transportation is an ideal reference for libraries and those who want to explore the issues that surround transportation in the united states and around the world
