Trucker Runner 2021-10-12 modern vehicles have electronic control units ecus to control various subsystems such as the engine brakes steering air conditioning and infotainment

these ECUs or simply controllers are networked together to share information and output directly measured and calculated data to each other. This in-vehicle network is a data goldmine for improved maintenance, measuring vehicle performance and its subsystems, fleet management, warranty, and legal issues. Reliability, durability, and accident reconstruction are the focus of data acquisition from HD vehicles using J1939 CAN bus. This book guides the reader on how to acquire and correctly interpret data from the in-vehicle network of heavy-duty HD vehicles. The reader will learn how to convert messages to scaled engineering parameters and how to determine the available parameters on HD vehicles along with their accuracy and update rate. Written by two specialists in this field, Richard Rick P. Walter and Eric P. Walter, principals at HEM Data located in the United States, the book provides a unique road map for the data acquisition user. The authors give a clear and concise description of the CAN protocol plus a review of all 19 parts of the SAE International J1939 standard. Family-pertinent standards are illuminated with tables, graphs, and examples. Practical applications covered are calculating fuel economy, duty cycle analysis, and capturing intermittent faults. A comparison is made of various diagnostic approaches including OBD-II, HD OBD, and worldwide harmonized WHW OBD data acquisition from HD vehicles using J1939 CAN bus. This is a must-have reference for those interested to acquire data effectively from the SAE J1939-equipped vehicles.

The idea of telematics appeared more than a decade ago, and it is possible to define it in a general and simple way as a communication system for collecting, processing, and distributing information. The transport services market is definitely the most important area for telematic applications. Transport telematics issues constitute a field of knowledge of transport that integrates information technology and telecommunications in applications for managing and controlling traffic in transport systems, stimulating technical and organizational activities that ensure improved effectiveness and safe operation of such systems. Integrated and cooperating telematic applications constitute intelligent transport systems. The basis of such systems is to efficiently collect and process information and to manage its flow within the system. This enables supplying information from almost all areas of transport activities in real time. Intelligent transport supported by a number of integrated telecommunications, measurement, and control engineering solutions, and by appropriate tools and software comprises telematic applications. They have an extensive range of use in many areas of transport, allowing the integration of the means and types of transport, including its infrastructure, business organization, and management processes. This monograph is a collection of selected papers presented at the Jubilee Transport Telematics Conference TST 2010 and is the result of the work of many scientists associated with this area of knowledge and who had spent years with the conference.

This year's set of papers includes 23 keynote papers and 537 refereed general papers in seven volumes. Experts from around the world have combined to address the leading edge of research and practical innovations in convection, combustion, heat exchangers, two-phase flow, and much more. Whether one is involved in mechanical, chemical, nuclear, or energy engineering, the quantity, international scope, and high quality of the contents make access to these volumes essential.

Built to Love reveals how companies can create captivating products that energize the marketplace and set the standard for what customers want and expect. Firms often hope the answer is to produce the latest high-technology devices, only to find that they fail to light up the marketplace or firms rely on ads that overstate or mislead, leaving the customer disappointed and disillusioned. Instead, a deeper emotional engagement between the customer and product is required, regardless of whether the products are physical products, services, technologies, software systems, or brands. Using a combination of industry-based research and laboratory experiments, the authors demonstrate that customers will richly pay for products that authentically provide emotional fulfillment. They uncover the science behind successful products that create an avid and loyal following and they present evidence that product emotions increase a product's success in the marketplace as well as a firm's success in the stock market, even when the economy is down. A practical how-to guide, the book next shows how to analyze customers' emotional needs and translate those needs into features that galvanize customers.

throughout the book uses revealing case studies that show how to energize customers in both consumer and business to business worlds in both large and small firms
