this monumental book traces the origins and development of mathematics in the ancient middle east from its earliest beginnings in the fourth millennium bce to the end of indigenous intellectual culture in the second century bce when cuneiform writing was gradually abandoned eleanor robson offers a history like no other examining ancient mathematics within its broader social political economic and religious contexts and showing that mathematics was not just an abstract discipline for elites but a key component in ordering society and understanding the world the region of modern day iraq is uniquely rich in evidence for ancient mathematics

because its prehistoric inhabitants wrote on clay tablets many hundreds of thousands of which have been archaeologically excavated deciphered and translated drawing from these and a wealth of other textual and archaeological evidence robson gives an extraordinarily detailed picture of how mathematical ideas and practices were conceived used and taught during this period she challenges the prevailing view that they were merely the simplistic precursors of classical greek mathematics and explains how the prevailing view came to be robson reveals the true sophistication and beauty of ancient middle eastern mathematics as it evolved over three thousand years from the earliest beginnings of recorded accounting to complex mathematical astronomy every chapter provides detailed information on sources and the book includes an appendix on all mathematical cuneiform tablets published before 2007

the waterways of ancient iraq were crucial to its prosperity while they were maintained iraq and neighbouring khuzistan in southwest iran were the richest and most productive agricultural areas of the middle east supporting the sasanian umayyad and abbasid empires when the waterways changed or fell into decay both the prosperity and the political role of iraq largely disappeared understanding the course of the rivers and how they changed is therefore pivotal to understanding the history of the region peter verkinderen s important book provides the first major re examination of the waterways of early islamic iraq in almost seventy years combining a close reading of early arab geographical and historical sources with analysis of modern satellite imagery the author reconstructs the course of each of the major rivers the euphrates tigris karun jarrahi and karhe from the 7th to the 12th centuries showing how they changed over the intervening five hundred years his extensive use of detailed narrative accounts found in arab historical sources has never previously been undertaken and the use of remote sensing has allowed the author to link traces of ancient river beds and canal systems to the rivers and canals mentioned in the early arab sources presenting a much fuller and more accurate picture than has previously been possible waterways of iraq is a work of the first importance unlikely to be superseded for many years to come

includes pictures examines the sumerians culture daily life at the cities and architecture includes ancient accounts describing the cities includes a bibliography for further reading in southern iraq a crushing silence hangs over the dunes for nearly 5 000 years the sands of the iraqi desert have held the remains of the oldest known civilization the sumerians when american archaeologists discovered a collection of cuneiform tablets in iraq in the late 19th century they were confronted with a language and a people who were at the time only scarcely known to even the most knowledgeable scholars of ancient mesopotamia the exploits and achievements of other mesopotamian peoples such as the assyrians and babylonians were already known to a large segment of the population through the old testament and the nascent field of near eastern studies had unraveled the enigma of the akkadian language that was widely used throughout the region in ancient times but the discovery of the sumerian tablets brought to light the existence of the sumerian culture which was the oldest of all the mesopotamian cultures although the sumerians continue to get second or even third billing compared to the babylonians and assyrians perhaps because they never built an empire as great as the assyrians or established a city as enduring and great as babylon they were the people who provided the template of civilization that all later mesopotamians built upon the sumerians are credited with being the first people to invent writing libraries cities and schools in mesopotamia ziskind 1972 34 and many would argue that they were the first people to create and do those things anywhere in world no site better represents the importance of the sumerians than the city of uruk between the fourth

and the third millennium bce uruk was one of several city states in the land of sumer located in the southern end of the fertile crescent between the two great rivers of the tigris and the euphrates discovered in the late 19th century by the british archaeologist william loftus it is this site that has revealed much of what is now known of the sumerian akkadian and neo sumerian people although uruk was not the only city that the sumerians built during the uruk period it was by far the greatest and also the source of most of the archeological and written evidence concerning early sumerian culture kuhrt 2010 1 23 uruk went from being the world s first major city to the most important political and cultural center in the ancient near east in relatively quick fashion long before alexandria was a city and even before memphis and babylon had attained greatness the ancient mesopotamian city of ur stood foremost among ancient near eastern cities today the greatness and cultural influence of ur has been largely forgotten by most people partially because its monuments have not stood the test of time the way other ancient culture s monuments have for instance the monuments of egypt were made of stone while those of ur and most other mesopotamian cities were made of mud brick and as will be discussed in this report mud brick may be an easier material to work with than stone but it also decays much quicker the same is true to a certain extent for the written documents that were produced at ur at its height ur was the center of a great dynasty that controlled most of mesopotamia directly through a well maintained army and bureaucracy and the areas that were not under its direct control were influenced by ur s diplomats and religious ideas ur was also a truly resilient city because it survived the downfall of the sumerians outright destruction at the hands of the elamites and later occupations by numerous other peoples which included saddam

hussein more recently

includes pictures includes ancient accounts and legends about eridu includes online resources and a bibliography for further reading includes a table of contents after the kingship descended from heaven the kingship was in eridu excerpt from the opening paragraph of the sumerian king list emerging from the desert flats of southern iraq can be seen the remains of a large mound approximately 1750 feet x 1750 feet in size surrounded by several smaller mounds known today as tell abu shahrain or in the ancient world as eridu this site contains some of best examples of the ubaid culture and it was one of the first urban centers of civilization in southern mesopotamia if not the first itself many famous stories came from the mythical landscapes of iraq s deep south in the literature of ancient sumer eridu was regarded as the primordial city the first urban center believed to have existed long before the great mythical flood that wiped out human culture in the book of genesis and other earlier traditions it was to places like this that western explorers first came in the 19th century searching for the origins of the lands which the bible described as the cradle of the human race in doing so they discovered that eridu was also a real place the astonishing site is located about 8 miles southwest of the sumerian city of ur and when it was first excavated in the mid 19th century western archaeologists were confused as to how a city as large as this could have existed in such a vast and waterless desert but eridu is positioned on the edge of the great alluvial plain of sumer a wild and beautiful marshland

where the tigris and the euphrates meet this was the biblical garden of eden an ancient landscape that was renowned for its fertility in the past to many westerners iraq s history and culture were a blank before 1991 but ironically as war engulfed the region it helped underscore the importance and influence of the area on western civilization it was here in the ferocious landscape of south iraq old sumer that the first laws science and cities came into being eridu is a place of extraordinary significance for the study of the earliest stages of civilization in history and it is one of the best examples of cultural continuity in mesopotamia from the earliest prehistoric stages in which settlements emerged to the later historic periods eridu had a special status not as the residence of a ruling dynasty of kings but for its religious significance a series of temples were built there devoted to the patron god of the city enki each one was built upon the ruins of its predecessor and each one represents the architectural religious and social changes that occurred at the site throughout its history eridu the history and legacy of the oldest city in ancient mesopotamia examines the tumultuous history of one of the most important cities of antiquity along with pictures depicting important people places and events you will learn about eridu like never before
