the safe and reliable operation of technical systems is of great significance for the protection of human life and health the environment and of the vested economic value the correct functioning of those systems has a profound impact also on production cost and product quality the early detection of faults is critical in avoiding performance degradation and damage to the machinery or human life accurate diagnosis then helps to make the right decisions on emergency actions and repairs fault detection and diagnosis fdd has developed into a major area of research at the intersection of systems and control engineering artificial intelligence applied mathematics and statistics and such application fields as chemical electrical mechanical and aerospace engineering ifac has recognized the significance of fdd by launching a triennial symposium series dedicated to the subject the safeprocess symposium is organized every three years since the first symposium held in baden baden in 1991 safeprocess 2006 the 6th ifac symposium on fault detection supervision and safety of technical processes was held in beijing pr china the program included three plenary papers two semi plenary papers two industrial talks by internationally recognized experts and 258 regular papers which have been selected out of a total of 387 regular and invited papers submitted discusses the developments and future challenges in all aspects of fault diagnosis and fault tolerant control 8 invited and 36 contributed sessions included with a special session on the demonstration of process monitoring and diagnostic software tools

1997

nonlinear structures systems volume 1 proceedings of the 41st imac a conference and exposition on structural dynamics 2023 the first volume of ten from the conference brings together contributions to this important area of research and engineering the collection presents early findings and case studies on fundamental and applied aspects of nonlinear dynamics including papers on experimental nonlinear dynamics jointed structures identification mechanics dynamics nonlinear damping nonlinear modeling and simulation nonlinear reduced order modeling nonlinearity and system identification

this welcome second edition to the 2002 original presents the logical arithmetical or computational procedures within communications systems that will ensure the solution to various problems the authors comprehensively introduce the theoretical elements which are at the basis of the field of algorithms for communications systems various applications of these algorithms are then illustrated with a focus on wired and wireless network access technologies the updated applications will focus on 5g standards and new material will include mimo systems space time block coding spatial multiplexing beamforming and interference management channel estimation mmwave model ofdm and sc fdma synchronization resource allocation bit and power loading filtered ofdm full duplex systems digital interference cancellation techniques
