whales and elephants are iconic giants of the marine and terrestrial animal world both are conspicuous representatives of wildlife conservation the issues of whaling and the ivory trade are closely linked both legally and politically in many ways some obvious and some surprising the treatment of both whales and elephants will be politically and legally contentious for years to come and is of great significance to conservation in general this book examines the current state of international environmental law and wildlife conservation through a comparative analysis of the treatment of whales and elephants in particular it describes the separate histories of international governance of both whales and elephants presenting the various treaties through which conservation has been implemented it is shown that international environmental law is influenced and shaped by important political actors many with opposing views on how best conservation and sustainable development principles are to be implemented modern environmental treaties are changing as weaknesses and loopholes are exposed in older and possibly outdated treaties such as the convention on international trade in endangered species of wild fauna and flora cites and the international convention for the regulation of whaling icrw such weaknesses can be seen in the efforts made by some states to circumvent or weaken cites and the international whaling commission and to resume commercial whaling and further in the efforts of countries to resume trade in ivory the argument is made that the convention on biological diversity could be used to begin reconciling opposed views and to focus conservation efforts the argument is made that effective conservation of species cannot be achieved through individual treaties but only through a synergistic approach involving multilateral environmental agreements ecosystems of legal instruments

through a combination of theoretical and empirical approaches this book explores the role of international environmental law in protecting and conserving plants underpinning every ecosystem on the planet plants provide the most basic requirements food shelter and clear air yet the world s plants are in trouble a fifth of all plant species are at risk of extinction with thousands more in perpetual decline in a unique study of international environmental law this book provides a comprehensive overview of the challenges and restrictions associated with protecting and conserving plants through analysing the relationship between conservation law and conservation practice the book debates whether the two work symbiotically or if the law poses more of a hindrance than a help further discussion of the law s response to some of the major threats facing plants notably climate change international trade and invasive species grounds the book in conservation literature using case studies on key plant biomes to highlight the strengths and weaknesses of the law in practice the book also includes previously unpublished results of an original empirical study into the correlations between the iucn red list and lists of endangered protected species in international instruments to conclude the book looks to the future considering broader reforms to the law to support the work of conservation practitioners and reshape humanity s relationships with nature the book will be of interest to scholars and students working in the field of international environmental law and those interested more broadly in conservation and ecological governance frameworks

the convention on international trade in endangered species cites is the best known and most controversial of international conservation treaties since it came into force 25 years ago debate has raged over its most basic assumptions cites treats the international trade in wildlife as the most important threat to the continued existence of wild species it offers a prescription of trade bans and restrictions for endangered species however it is now generally acknowledged that for most species habitat loss is a much more significant threat some argue that the cites remedy actually exacerbates the problem by removing the incentive to conserve wildlife habitat this collection of essays the first of its kind charts the controversies and changes within cites it provides case studies of the way cites has dealt with particular species and notes the growing role of the south in shaping the direction of the treaty it considers the role of sustainable use the precautionary principle and unilateralism within cites finally it examines options for the future of cites implicit within a number of the contributions is the recognition that questions of wildlife conservation cannot be divorced from wider issues of land use development and social justice this book provides an essential resource for policy makers practitioners academics and students concerned with conservation development and trade

human activities are depleting ecosystems at an unprecedented rate in spite of nature conservation efforts worldwide many ecosystems including those critical for human well being have been damaged or destroyed states and citizens need a new vision of how humans can reconnect with the natural environment with its focus on the long term holistic recovery of ecosystems ecological restoration has received increasing attention in the past decade from both scientists and policymakers research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked this is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration while international environmental law iel has developed significantly as a discipline over the past four decades this book enquires whether iel can now assist states in making a strategic transition from not just protecting and maintaining the natural environment but also actively restoring it arguing that states have international duties to restore this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law european union law and national law perspective the book concludes with a discussion of several contemporary themes of interest to both lawyers and ecologists including the role of private actors protected areas and climate change in ecological restoration

how can the international conservation movement protect biological diversity while at the same

time safeguarding the rights and fulfilling the needs of people particularly the poor contested nature argues that to be successful in the long term social justice and biological conservation must go hand in hand the protection of nature is a complex social enterprise and much more a process of politics and of human organization than ecology although this political complexity is recognized by practitioners it rarely enters into the problem analyses that inform conservation policy structured around conceptual chapters and supporting case studies that examine the politics of conservation in specific contexts the book shows that pursuing social justice enhances biodiversity conservation rather than diminishing it and that the fate of local peoples and that of conservation are completely intertwined

great uncertainty typically surrounds decisions and management actions in the conservation of biodiversity and natural resource management and yet there are risks of serious and irreversible harm for both biodiversity and the humans that rely on it the precautionary principle arguably underlies all international conservation efforts and promotes acting to avoid serious or irreversible environmental harm despite lack of scientific certainty as to the likelihood magnitude or cause of harm this book is the first to examine the application of the precautionary principle to biodiversity conservation and natural resource management incorporating perspectives from scientists economists lawyers and practitioners from both developing and developed countries it analyses the application and impacts of the principle in many areas including forestry invasive alien species wildlife trade protected areas and fisheries in a range of national and international contexts particular attention is drawn to issues of equity livelihoods science and politics and the book provides guidelines for applying the precautionary principle to biodiversity conservation and natural resource management

the development of international wildlife law has been one of the most significant exercises in international law making during the last fifty years this second edition of lyster s

international wildlife law coincides with both the un year of biological diversity and the twenty fifth anniversary of simon lyster s first edition the risk of wildlife depletion and species extinction has become even greater since the 1980s this new edition provides a clear and authoritative analysis of the key treaties which regulate the conservation of wildlife and habitat protection and of the mechanisms available to make them work the original text has also been significantly expanded to include analysis of the philosophical and welfare considerations underpinning wildlife protection the cross cutting themes of wildlife and trade and the impact of climate change and other anthropogenic interferences with species and habitat lyster s international wildlife law is an indispensable reference work for scholars practitioners and policy makers alike

saving the world s flora and fauna especially high profile examples such as chimpanzees whales and the tropical rain forests is big business individuals and companies channel their resources to the preservation of nature through various ways one of which is the funding of environmental non governmental organizations engos and community based organizations cbos this book is the first to comprehensively address this issue and focus on a dominant theme in environmental philanthropy the links between engos and cbos and their sponsors especially the private sector it has been argued that donor support is based on recipient s perceived expertise and needs with no favouritism of flagship environmental organizations as recipients of donor funds a counterview holds that the private sector prefers to fund mainstream engos for environmental research and policy reforms congenial to industrial capital the authors show that the debate about these arguments together with the empirical evidence on which they are based may shed light on certain aspects of the nature of environmental philanthropy the book evaluates practical examples of environmental philanthropy from africa and elsewhere against philosophical questions about the material and geographical expressions of philanthropy and

this book provides a blueprint for an international legally binding instrument ilbi for the conservation and sustainable use of marine biodiversity beyond national jurisdiction bbnj the development of an ilbi could signify a pivotal turning point in the law of the sea by addressing regulatory governance and institutional gaps and deficiencies in the existing

international law framework for bbnj this book analyses the essential components an ilbi will require to effectively conserve and sustainably use bbnj focusing on marine genetic resources areabased management tools environmental impact assessments capacity building and marine technology transfer it investigates potential areas of compromise as the success of an ilbi will rely upon the support of a powerful bloc of maritime states principally the united states the united kingdom russia the netherlands france and japan the participation of major maritime powers will be critical as it is their nationals corporations and flag vessels that have the financial and technical wherewithal to undertake activities beyond national jurisdiction this bloc of states has historically been the strongest proponent of the grotian doctrine of freedom of the seas as it aligns with their predominant interest to preserve navigational freedom for their merchant and military fleets accordingly this book assesses the extent to which the grotian doctrine continues to exert influence on the development of the law of the sea and the development of an ilbi providing a comprehensive overview of this important development in international law this book will be of interest to students lecturers and academics of law of the sea international environmental law and biodiversity law

originally published in 1979 international trade in wildlife is a product of the 1973 convention on international trade in endangered species of wild fauna and flora conference containing the full text of the cities convention the volume outlines the animals and plants controlled by cities and describes the protective policies put in place to protect endangered plants and animals it gives a detailed background to the international traffic in monkey s spotted cats whales ivory parrots tortoises marine turtles crocodiles butterflies sponges and rare orchids at the time of publication and acts as a comprehensive document on the conservation policies enacted through cities as well as facts surrounding the decline of endangered species although published over 40 years ago the document still offers a

comprehensive and useful guide to conservation and will be an important historical document for environmental policy makers and conservationists alike

master s thesis from the year 2007 in the subject forestry forestry economics grade 1 7 university of göttingen institut für forstpolitik und naturschutz language english abstract community based conservation cbc refers to wildlife conservation efforts that involve rural people as an integral part of a wildlife conservation policy in africa and specifically in cameroon there have been changes in state policies towards natural resources management particularly forest resources this study deals basically on cameroon with national forest cover of over 42 which constitutes one of its major economic resources since 1995 a new forest policy act was enacted proclaimed in 1994 to accommodate two approaches that is community forestry and sustainable forest management conserving and enhancing biodiversity through rural peoples involvement was one of the components of the new forest policy act of 1995 the study analyses the conditions under which the cbc policies can be successfully implemented in cameroon with the case of the korup national park knp and its support zone and the former korup project kp it also investigates the interest and the relationship of the different stakeholders concerned especially the local community the thesis uses three hypotheses which are limited to cbc semi structured questionnaires and secondary data to test or investigate successful policy implementation in the knp by analysing i the role the local communities ii the international environmental ngos and groups played in the former korup project 1988 2003

and iii the level of biodiversity conservation and rural development in the korup project area kpa the study was carried out in the southern sector of the knp with a simple random sampling of 78 respondents out of 11 villages of the 32 villages in and around the national park the results indicate i low participation of the local communities in the integrated conservation and development project icdp and later joint participatory biodiversity conservation and rural development approach of the kp ii a difficult relationship between the international stakeholders and the local communities and iii a temporary success in biodiversity conservation and a failure in rural development
