the manual of venous and lymphatic diseases constitutes a concise but comprehensive and contemporary description of the nature and management of venous and lymphatic diseases this innovative book instructs the post graduate trainee in phlebology and is also valuable to undergraduate students wishing to gain a broader knowledge than is available in general surgical texts additionally it is a useful reference for practising phlebologists vascular surgeons and imaging specialists the text covers basic principles diagnosis and treatment of chronic venous disease venous thrombo embolism lymphoedema and vascular malformations revolutions from grub street charts the evolution of britain s popular magazine industry from its seventeenth century origins through to the modern digital age following the reforms engendered by the glorious revolution of 1688 the grub street area of london which later transmuted into the cluster of venerable publishing houses centred on fleet street spawned a vibrant culture of commercial writers and small scale printing houses exploiting the commercial potential offered by improvements to the system of letterpress printing and allied to a growing demand for popular forms of reading matter during the course of the eighteenth century one of britain s pioneering cultural industries began to take meaningful shape publishers of penny weeklies and sixpenny monthlies sought to capitalise on the opportunities that magazines combining lively text with appealing illustrations offered for the turning of a profit the technological revolutions of the nineteenth century facilitated the emergence of a host of small and medium sized printer publishers whose magazine titles found a willing and growing audience ranging from britain s semi literate working classes through to its fashion conscious ladies in 1881 the launch of george newnes highly innovative tit bits magazine created a publishing sensation ushering in the era of the modern million selling popular weekly newnes and his early collaborators arthur pearson and alfred harmsworth went on to create a group of competing business enterprises that during the twentieth century emerged as colossal publishing houses employing thousands of mainly trade union regulated workers in the early 1960s these firms together with odhams press merged to create the basis of the modern magazine giant ipc practically a monopoly producer until the 1980s ipc was convulsed thereafter by the dual revolutions of globalization and digitization finding its magazines under commercial attack from all directions challenged first by emap natmags and condé nast by the 1990s ipc faced competition both from expanding european rivals such as h bauer and a variety of newly formed agile domestic competitors who were able to successfully exploit the opportunities presented by desktop publishing and the world wide web in a narrative spanning over 300 years revolutions from grub street draws together a wide range of new and existing sources to provide the first comprehensive business history of magazine making in britain a computational method for lateral directional aerodynamics of fighter configurations is developed the leading edge vortices are represented by free vortex filaments which are adjusted iteratively to satisfy the force free condition the forebody vortex separation both symmetrical and asymmetrical is calculated using slender body theory effect of boundary layer separation on lifting surfaces is accounted for using the effective sectional angels of attack the latter are obtained iteratively by matching the nonlinear sectional lift with the computed resulted based on lifting surface theory results for several fighter configurations are employed for comparison with available data it is shown that the present method produces reasonable results in predicting sideslip derivatives while roll and yaw rate derivatives do not compare very well with forced oscillation test data at high angles of attack industrial usage of this has produced mixed results at this time the use of these methods in a production manner is not recommended includes part las actividades nucleares está regida por infinidad de normas reglamentaciones directivas documentación específica y todo tipo de manuales de referencia obligatoria la gran mayoría llega a manos de usuarios operadores talleristas etc en idioma inglés el idioma de uso aeronáutico por naturaleza a ello se suma el hecho de que la industria aeronáutica no está aislada de las actividades humanas sino que interactúa se nutre y hace su aporte a ellas creando la necesidad de un sólido vínculo interdisciplinario ahora bien si bien conocemos la existencia de esta necesidad de creación de un fuerte vínculo interdisciplinario también sabemos que en esta tarea nos encontramos con una gran barrera en el mismo la comunicación a partir de esto es posible considerar varios impedimentos en esa barrera uno de los más importantes es el idioma como factor concurrente está el uso de regionalismos y como consecuencia de ellos la aplicación de jergas específicas desde los albores de la aviación hemos convivido con ese problema sucede que al incrementarse día a día el número de operaciones al crecer el parque aeronáutico y convertirse la aviación en una necesidad para el resto de las actividades humanas las condiciones inseguras los incidentes y los accidentes continúan produciéndose quedando de manifiesto las falencias de la industria en ese aspecto las nuevas tecnologías en materiales los nuevos métodos de diseño y los planes de mantenimiento con técnicas de inspección no destructivas han reducido los riesgos latentes de fallas técnicas pero no todos los aspectos relacionados con la vida humana puede solucionarlos la tecnología por lo que en paralelo con los desarrollos tecnológicos se han creado conceptos de gestión del factor humano que han contribuido en gran medida a la seguridad operacional y desde el año 1978 su estudio y prevención se ha expandido considerablemente por lo que en todos los programas de estudio y mejoramiento de la interacción antropológica crm mrm loft shell etc la comunicación es un vínculo importantísimo en la seguridad operacional si trasladamos lo expuesto a las tareas diarias ya sea en la operación de una aeronave en el mantenimiento de la misma en el control del tránsito aéreo en la administración de las empresas operadoras o en cualquier otra actividad relacionada con la industria aeroespacial se presentará el problema del uso del idioma inglés los regionalismos y las jergas específicas factores tendientes a desencadenar una sucesión de eventos inseguros que podrían desembocar en un incidente o en un accidente de consecuencias catastróficas cuando se analiza la comunicación oral y escrita es importante tener en cuenta que si bien manejamos un vocabulario técnico en común es inevitable tanto en inglés como en español el uso de regionalismos y argot jargon en inglés por ejemplo un técnico ecuatoriano hablará de la bitácora de la aeronave mientras que uno argentino hablará de la libreta historial de la aeronave esta divergencia puede justificarse como un caso de regionalismos de países diferentes ahora bien en el segundo ejemplo el mismo técnico argentino en la provincia de buenos aires hablará de chavetas para frenar un bulón mientras que otro técnico argentino en córdoba hablará de cupillas para frenar un bulón en paralelo se puede ver también que los diferentes fabricantes tienen léxicos específicos con respecto a sus productos por ejemplo uno de los más conocidos fabricantes británicos de motores posee un sistema propio de códigos de denominación y aplicación de boletines de servicio no mandatorios muy distinto al que manejan sus competidores directos de estados unidos y Canadá la normalización el estilo y la edición el trabajo intelectual el
