6 ions can pass through a single membrane channel at a rate of 10 ions second over the last decade the ability to measure ion flux so precisely and to document the opening and closing of individual ion channels has provided a powerful tool to those working on smooth muscle physiology and vascular reactivity the use of potassium channel blockers by tom lloyd in the 1960s and calcium channel blockers by ivan mcmurtry in the 1970s indicated the importance of ion flux in regulating pulmonary vascular tone recent advances in technology principally the patch clamp technique and fluorescent ion sensitive dyes now permit a more detailed description of physiologic mechanisms this volume arises from the sixth grover conference on the pulmonary circulation a nato advanced research workshop held in colorado in october 1992 a group of international scientists who are leaders in the field of ion flux focused their attention on the problems of the pulmonary vasculature the chapters in this book describe the present state of knowledge of the movement and storage of ions in vascular endothelial and smooth muscle cells those who are not familiar with the techniques of patch clamping and calcium imaging will find an introduction to these methods in the chapters by leblanc and wan and archer et al the role of potassium channels in oxygen sensing illustrates the rapid progress which the study of ion currents has made possible

this volume is one of the two which offer a comprehensive course  
in those parts of theory and practice of plane and geodetic  
surveying that are most commonly used by civil engineers the first  
volume covers in 24 chapters the most common surveying  
operations each topic introduced is thoroughly described the  
theory is rigorously developed and a large number of numerical  
examples are included to illustrate its application general  
statements of important principles and methods are almost

invariably given by practical illustration apart from illustrations of old and conventional instruments emphasis has been placed on new or modern instruments both for ordinary as well as precise work a good deal of space has been given to instrumental adjustments with thorough discussion of geometrical principles in each case many new advanced problems have also been added which will prove useful for competitive examinations

off the record is a revealing exploration of piano performing practices of the high romantic era author and well known keyboard player neal peres da costa bases his investigation on a range of early sound recordings acoustic piano roll and electric that capture a generation of highly esteemed pianists trained as far back as the mid nineteenth century placing general practices of late nineteenth century piano performance alongside evidence of the

stylistic idiosyncrasies of legendary pianists such as carl reinecke 1824 1910 theodor leschetizky 1830 1915 camille saint saëns 1838 1921 and johannes brahms 1833 1897 he examines prevalent techniques of the time dislocation unnotated arpeggiation rhythmic alteration tempo fluctuation and unfolds the background and lineage of significant performer pedagogues throughout peres da costa demonstrates that these early recordings do not simply capture the idiosyncrasies of aging musicians as has been commonly asserted but in fact represent a range of established expressive practices of a lost age an extensive collection of these fascinating and sometimes rare professional recordings of the romantic age masters are available on a companion web site and in addition peres da costa himself a renowned period keyboardist illustrates points made throughout the book with his own playing of essential value to student and professional pianists historical musicologists of 19th and early 20th century performance practice and also to the general music aficionado audience off the record is an indispensable resource for scholarly research performance inspiration and listening enjoyment
