New Computing Techniques In Physics Research Ii - Proceedings Of The Second International Workshop On Software Engineering Artificial Intelligence And Expert Systems In High Energy And Nuclear Physics 1992-09-04

a vivid example of the growing need for frontier physics experiments to make use of frontier technology is in the field of artificial intelligence ai and related themes by ai we are referring here to the use of computers to deal with complex objects in an environment based on specific rules symbolic manipulation to assist groups of developers in the design coding and maintenance of large packages software engineering to mimic human reasoning and strategy with knowledge bases to make a diagnosis of equipment expert systems or to implement a model of the brain to solve pattern recognition problems neural networks these techniques developed some time ago by ai researchers are confronted by down to earth problems arising in high energy and nuclear physics however similar situations exist in other big sciences such as space research or plasma physics and common solutions can be applied the magnitude and complexity of the experiments on the horizon for the end of the century clearly call for the application of ai

techniques solutions are sought through international collaboration between research and industry

this handbook is concerned with principles of human factors engineering for design of the human computer interface it has both academic and practical purposes it summarizes the research and provides recommendations for how the information can be used by designers of computer systems the articles are written primarily for the professional from another discipline who is seeking an understanding of human computer interaction and secondarily as a reference book for the professional in the area and should particularly serve the following computer scientists human factors engineers designers and design engineers cognitive scientists and experimental psychologists systems engineers managers and executives working with systems development the work consists of 52 chapters by 73 authors and is organized into seven sections in the first section the cognitive and information

processing aspects of hci are summarized the following group of papers deals with design principles for software and hardware the third section is devoted to differences in performance between different users and computer aided training and principles for design of effective manuals the next part presents important applications text editors and systems for information retrieval as well as issues in computer aided engineering drawing and design and robotics the fifth section introduces methods for designing the user interface the following section examines those issues in the ai field that are currently of greatest interest to designers and human factors specialists including such problems as natural language interface and methods for knowledge acquisition the last section includes social aspects in computer usage the impact on work organizations and work at home
